A high-gain, two-channel, wide-band, d-c amplifier for scaling, summing or current control, OPS–III is in modular form for inclusion into a larger system. I-C front ends in both the uncommitted control channel and the current channel contribute very low offsets for accurate tracking of control signals. The low shunt capacitance output allows the uncommitted control channel to be programmed rapidly in voltage mode, and allows the current control channel to recover exceptionally fast from the effect of step loads.

Typical OPS III module

UNCOMMITTED CONTROL CHANNEL

OPEN LOOP d-c GAIN: $>10^6$ volts per volt.

FEEDBACK: Provision is made for feedback from the (–) output/sense terminal so that OPS–III will function as a wideband, inverting d-c amplifier. It is a unipolar device, producing a negative (–) output for a positive (+) input with respect to the (+) plus output/sense terminal, which is common. OPS–III operational power amplifiers can be used to stabilize various physical phenomena heat, speed, force, electrochemical action ... that is, to whatever the feedback is made proportional .

DYNAMICS:

Maximum slewing rate (the fastest rate of change that can be obtained by overdriving or forcing): >1 volt per microsecond.

Programming time constant: The RC product of the feedback resistance and capacitance. The resistance is a nominal 1000 ohms per volt; the capacitance is adjustable internally from 800 pF to 1800 pF.

Frequency response: The maximum modulation frequency is given by the expression: f max = $10^6/\pi E_{p\text{-}p}$. The -3 dB frequency is given by the programming time constant.

LOAD REACTANCE: Operational power supplies are restricted to capacitive loads no greater than 0.001 microfarad. Built-in rolloff control (lag) networks will allow the OPS to drive most cable or harness capacitances up to this limit without loss of speed. To drive larger capacitances, external voltage-feedback and/or output capacitance will be required to stabilize the OPS as a conventionally filtered power supply. See Kepco's PTR design group. When driving inductive loads, diode protection is required for the back emf generated across an "L" by a programmed di/dt.

OFFSET NULLING: The initial or bias part of the uncommitted channel's voltage offset (E_{io}) can be nulled (zeroed) by a built-in trimmer.

REFERENCES: A d-c reference is provided, plus 6.2V (±5%) with respect to common, the plus (+) sense terminal, able to provide up to 1 milliampere for control or offsetting or biasing purposes.

CURRENT CONTROL CHANNEL

The output current of OPS–III is sampled by an internal resistance dropping 0.5 volt. An internal current setting potentiometer is provided. External control can be exercised by an adjustment voltage (0–0.5) or by a remote potentiometer.

Setting range: 2% I_o max to 110% I_o max.

Control range (that part of the setting range for which the current meets its stabilization specification): 10% to 100% I_o max.

Note: Using current feedback to the uncommitted control channel, based on a 1-volt sample, control can be exercised from approximately 1 μA to the maximum output current.

CURRENT RECOVERY (for step load voltage): The current recovery time constant is the smaller of the programming time constant or the ratio of the current setting to the tabulated output capacitance.

MODE FLAG (a d-c signal referred to (+) sense):

Uncommitted channel: Flag is ≤ 0V d-c.

Current control channel: Flag is ≥5V d-c, source impedance 5k ohms.

GENERAL

TEMPERATURE, ambient operating: -20°C to +71°C. Full output current at +71°C, no derating. Cooling is by natural convection, no external heat sink is required.

TEMPERATURE, storage: -40°C to +85°C.

SOURCE POWER INPUT: Units are factory wired for 105–125V a-c. A switch reconfigures the input for 210–250V a-c, 50–440 Hz. Power must be hard-wired to the provided terminals. Internally fused.. Source current: 1.2 amperes at 125V a-c. Power factor: 0.9.

ISOLATION FROM GROUND: The OPS–III circuit is isolated from its case and ground. It may be placed in series with 500 volts d-c (or peak) off ground. Common mode current, output to ground: <5 microamperes rms, 50 microamperes p-p at 60 Hz.

TERMINALS AND ADJUSTMENTS: All input, output, control and sensing connections are made via a pair of barrier-strips located on one of the small surfaces. The built-in zeroing and lag adjustments and current control are located on the same surface and are accessible for screwdriver adjustment without removing the cover.

MOUNTING: OPS–III modules will mount on any of its three surfaces using 8-32 hardware to recessed threaded inserts.

Rack mounting accessories:

RA 35–1 mounts a single OPS–III in 3½" x 19" Price: $15.00.
RA 33–3 mounts up to 3 OPS–III in 3½" x 19" Price: $15.00.
RA 34–4 mounts up to 4 OPS–III in 5¼" x 19" Price: $15.00.

VOLTAGE CONTROL CHANNEL

OPEN LOOP d-c GAIN: $>10^6$ volts per volt.

CONTROL PROGRAMMING: A 10-turn, precision feedback rheostat senses the voltage at the (-) output/sense terminal. Both the feedback rheostat and the input 1 milliampere reference can be disconnected (by removing the jumpers on the mating plug) so that an external d-c signal can be applied as if to an inverting amplifier.

DYNAMICS

Maximum slewing rate (the fastest rate of change that can be obtained by overdriving or forcing): >1 volt per microsecond.

Programming time constant: The RC product of the feedback resistance and capacitance. The resistance is a nominal 1000 ohms per volt; the capacitance is adjustable 800 pF to 1600 pF.

LOAD REACTANCE: Operational power supplies are restricted to capacitive loads no greater than 0.001 microfarad. Built-in rolloff control (lag) networks will allow the OPS to drive most cable or harness capacitances up to this limit without loss of speed. To drive larger capacitances, external voltage-feedback and/or output capacitance will be required to stabilize the OPS as a conventionally filtered power supply. See Kepco's JMK design group. OFFSET NULLING: The initial or bias part of the voltage control channel's voltage offset (E_{io}) can be nulled (zeroed) by a built-in trimmer.

CURRENT CONTROL CHANNEL

Two current mode input amplifiers are provided; one is for control of the current channel by a panel-mounted, 10-turn precision potentiometer; the second is for external control by either a voltage (0–0.5 or 0–1.0 volt) or a remote potentiometer. Whichever of the input amplifiers is programmed to the lowest value of current will exercise control over the output.

Setting range: 2% I_o max. to 100% I_o max.

Control range (that part of the setting range for which the current meets its stabilization specification): 10% to 100% I_o max.

CURRENT RECOVERY (for step load voltage): The current recovery time constant is the smaller of the programming time constant or the ratio of the current setting to the tabulated output capacitance.

MODE INDICATORS: A pair of panel lamps indicate which control channel (voltage or current) is in operation. A d-c flag signal is delivered to the rear connector.

GENERAL

SOURCE POWER INPUT: Units are factory-wired for 105–125V a-c. A switch enables changeover to 210–250V a-c, 50–65 Hz, protected by a resettable circuit breaker. A 3-wire line cord is provided.

ISOLATION FROM GROUND: The circuit of OPS models in Groups Ⅳ and Ⅴ is isolated from its case and ground. It may be placed in series with up to 500 volts d-c (or peak) off ground. Common mode current from output to ground: <5 microamperes rms, 50 microamperes peak-to-peak at 60 Hz.

A mating connector is supplied, wired with jumpers for local control and sensing. D-C output connections are made via rear-mounted "5-way" binding posts. Source power connection is made via a detachable, 3-wire safety line cord. The mating connector is Kepco Model PC–4. Extra PC–4 connectors are $10.00 each.

METERS: Two dual range, 2" ±3% recessed meters monitor the (average) output voltage and current. Panel switches provide a 10:1 range of sensitivity.

FINISH: *Panel:* Two-tone black and light gray. (Color No. 26440, Fed. Std. 595).

OPS VI-VII-VIII

OPERATIONAL POWER SUPPLIES

A high-gain, single-channel, wide-band power supply which can be configured for a variety of signal processing chores, OPS Groups VI and VII are "half-rack" sized, OPS Group VIII is a full (19") rack width for systems or bench use. They are equipped with meters and a 10-turn voltage control. The I-C front end in the control channel contributes very low offsets for accurate tracking of control signals. The low shunt capacitance output allows for rapid voltage programming or fast current-stabilized load recovery.

This tabulation specifies the limit of change in the amplifier offsets for defined variations in the major influences. To obtain a realistic appraisal of the behaviour in your environment, multiply each influence by its probable range of variations and sum the pertinent effects.

(2) Whichever is greater.
(3) One terminal must be grounded or connected so that common-mode current does not flow through the load or through a current-sensing resistor.
(4) 20 Hz to 10 MHz.

VOLTAGE CONTROL CHANNEL

OPEN LOOP d-c GAIN: >0.5 x 10^6 volts per volt.

CONTROL PROGRAMMING: A built-in feedback rheostat senses the voltage at the (-) output/sense terminal. OPS Groups VI, VII and VIII models have a fixed 1.0 milliampere connected to their input summing terminal. This current passes through the feedback rheostat so that output control is exercised at 1000 ohms per volt. Both the feedback rheostat and the input 1 milliampere reference can be disconnected (by removing jumpers on the rear barrier-strip) so that an external d-c signal can be applied as if to an inverting amplifier and/or the feedback can be taken from another point to stabilize various physical phenomena (heat, speed, force, electrochemical action. . .).

DYNAMICS

Maximum slewing rate (the fastest rate of change that can be obtained by overdriving or forcing): >100V per millisecond for models rated less than 20 amperes, >50V per millisecond for models rated 20 amperes and greater.

Programming time constant: The programming time constant is controlled by the RC product of the selected feedback resistance and the selected feedback capacitance. The nominal feedback resistance is 1000 ohms per volt of output. The range of capacitance available internally is 2500 pF to 3500 pF, except the 6 volt and 15 volt models are shunted by approximately 5000 pF.

LOAD REACTANCE: Operational power supplies are restricted to capacitive loads no greater than 0.001 microfarad. Built-in rolloff control (lag) networks will allow the OPS to drive most cable or harness capacitances up to this limit without loss of speed. To drive larger capacitances, external voltage feedback and/or output capacitance will be required to stabilize the OPS as a conventionally filtered power supply. See Kepco's JQE design group. When driving inductive loads, diode protection is required for the back emf generated across an "L" by a programmed di/dt.

OFFSET NULLING: The initial or bias part of the voltage control channel's voltage offset (E_{io}) can be nulled (zeroed) by a built-in trimmer.

CURRENT CONTROL CHANNEL

The output current of the OPS Groups VI, VII and VIII is *limited* by a built-in current sensing and feedback arrangement. This channel offers approximately 2% current stabilization as a maximum current limiter. A separate control channel is provided for the external control of this current limit using a small d-c control voltage with respect to the (+) output terminal, or a resistor-divider across the internal reference. When programming the current-limit, the panel current control serves as an overriding backup. For the precision control of current, the voltage control channel may be connected so as to sample the drop across an external current-sensing resistor to obtain current feedback. Based on a 1-volt sample, control can be exercised from approximately 1-microampere to the maximum output current.

CURRENT RECOVERY (for step load voltage): The current recovery time constant is the smaller of the programming time constant or the ratio of the current setting to the tabulated output capacitance.

GENERAL

(4) 20 Hz to 10 MHz.

VOLTAGE CONTROL CHANNEL

OPEN LOOP d-c GAIN: >0.5 x 10^6 volts per volt.

CONTROL/PROGRAMMING: A built-in, fixed feedback resistor (500 kΩ for OPS 500, 1 MΩ for OPS 1000 and 2 MΩ for OPS 2000) senses the voltage at the (-) output/sense terminal. A 0–1 milliampere control current connected to the input summing terminal, therefore, programs the d-c output throughout the rated range. This current may be externally generated–as from a function generator–or may be derived from the built-in +6.2V reference. The internal feedback resistance can be easily disconnected so that feedback can be taken from another point to stabilize various physical phenomena (heat, speed, force, current, electrochemical action . . ., etc.).

DYNAMICS

Maximum slewing rate (the fastest rate of change that can be obtained by overdriving or forcing): >1 volt per microsecond.

Programming time constant: The RC product of the feedback resistance and capacitance. The resistance is a nominal 1000 ohms per volt, the capacitance is selectable internally from 400 pF to 3900 pF.

Frequency response: The maximum output frequency is given by the expression: f max. = $10^6/\pi E_{pp}$. The -3 dB frequency is given by the programming time constant.

LOAD REACTANCE: Operational power supplies are restricted to capacitive loads no greater than 0.001 microfarad. Built-in rolloff control (lag) networks will allow the OPS to drive most cable or harness capacitances up to this limit. To drive larger capacitances, external voltage feedback and/or output capacitance will be required to stabilize the OPS as a conventionally filtered power supply.

OFFSET NULLING: The initial or bias part of the voltage control channel's voltage offset (E_{io}) and offset current (I_{io}) can be nulled (zeroed) by built-in trimmers.

CURRENT CONTROL CHANNEL

Output current is controlled by a built-in current sensing and feedback circuit, compensated to account for the shunting effect of the voltage feedback circuit. The stabilization of this channel against the four major influences is tabulated. For the precision control of current, the voltage control channel may be connected so as to sample the drop across an external current-sensing resistor to obtain current feedback. Based on a 10-volt sample, control can be exercised from approximately 100 microamperes to the maximum output current.

CURRENT RECOVERY (for step load voltage): The current recovery time constant is the smaller of the programming time constant or the ratio of the current setting to the tabulated output capacitance.

GENERAL

TEMPERATURE RATINGS:
Storage: -40°C to +85°C.
Operating: -20°C to +65°C. Cooling is by natural convection.

SOURCE POWER INPUT: Units are factory-wired for 105–125V a-c, 50–65 Hz. A simple jumper change will reconfigure the input for 210–250V a-c, 50–65 Hz. Power consumption: approximately 75 watts; 0.9 power factor; protected by a built-in fuse. A 3-wire line cord is provided.

ISOLATION FROM GROUND: The circuit and output terminals have no d-c connection to ground and may be floated up to 1000 volts (d-c or peak) off ground. The common mode current from output to ground is less than 30 microamperes rms, 300 microamperes peak-to-peak at 60 Hz.

TERMINALS: A front panel patch board of 10 binding posts provide access to the voltage control channel's summing input (null junction), the ±6.2V references, the two output connections and ground. They are arranged for ease in setting up operational manipulations. All connections are duplicated on a barrier-strip mounted at the rear.

MOUNTING: OPS Group IX models are "half-rack" sized for bench-top use or rack mounting in either the RA–24, or RA–32 hardware systems.

FINISH: *Panel:* Gray Color 26440, Fed. Std. 595.

Voltage feedback is by means of a 5-position range switch and 10-turn, 20 PPM TC wire-wound vernier control with remote programming within the span of any one range (to zero with derating). Current may be regulated with external sensing and feedback using the rating chart to determine the allowable compliance range.

SOURCE: 105–125/210–250V a-c		<0.01%	<0.1% at rated sample(1)
LOAD: No load – full load		<0.01% or 2 mV(2)	<0.01% at rated sample(1)
TIME: 8-hours [drift]		<0.01% or 2 mV(2)	<0.05% or 0.2 mA(2)
TEMPERATURE: Per ° C		<0.01%	<0.05% at rated sample(1)
UNPROGRAMMED OUTPUT DEVIATION:(3) (Ripple and noise)	rms	<1 mV	<0.01% of I_o max
	p-p(4)	<5 mV	<0.05% of I_o max

(2) Whichever is greater.
(3) One terminal grounded or connected so that the common-mode current does not flow through the load or (in current mode) through a sensing resistor.
(4) 20 Hz to 10 MHz.

INPUT: 105-125 V or 210-250V a-c (selected), 50–440 Hz, single phase.

TEMPERATURE, AMBIENT OPERATING: –20°C to +55°C.

TEMPERATURE STORAGE: –40°C to +85°C.

COOLING: Convection.

ISOLATION: The output terminals are isolated from the grounded case. A maximum of 600 volts (d-c or peak) can be connected between either output terminal and the case.

AC OUTPUTS: Two unregulated, 6.5V a-c, 6A outputs.

CONTROL RESOLUTION: 0.02%, 5 step range selector, 10-turn vernier.

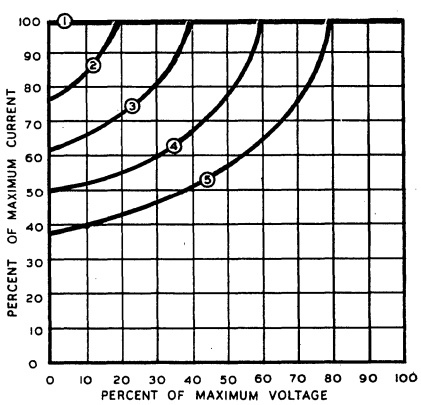
PROGRAMMING: HB is programmable by resistance or external voltage signals within the boundary of each range. By following the rating curves, programs can be executed below the range boundary. Control current is ≅ 10 mA for 100 ohms/V. The positive terminal is common.

VOLTAGE RECOVERY (for step load current): < 50 microseconds.

REMOTE ERROR SENSING: (Model HB 525M only) compensates to 0.5 volt drop per output lead.

OVERSHOOT (Turn-on/off): None above 25% voltage setting; negligible below 25% when preloaded 10% minimum.

RATING CURVES: Output is designed to deliver 100% of rated current within the span of any one range. When operating outside the selected range, either by remote programming, or as the compliance voltage in current mode, use the graph to determine the maximum current that can be drawn at reduced voltage.



RATING CURVES

Curves represent the volt-ampere rating for range switch positions 1–5. To use, determine which position covers the desired voltage. Read the maximum current for each voltage on the left scale.

METERS: Suffix "M" designates a pair of 2½", 2% meters. Delete suffix for unmetered unit.

TERMINALS: Binding posts on front panel, plus, minus and ground. Multi-terminal barrier strip at the rear contains output, sensing and control terminals.

DIMENSIONS: 3½"H x 19"W x 14⅜"D (behind panel).

FINISH: Light gray, color 26440, per Fed. Std. 595.

OUTPUT RANGES

VOLTAGE MODE: 0–100% of rated voltage.

CURRENT MODE (internally sensed):

Setting range: 2% I_o max. to 110% I_o max.

Control range (that part of setting range for which the current meets its stabilization specification): 10% I_o to 100% I_o max.

CURRENT MODE (externally sensed, 1-volt sample with current feedback to the *voltage* amplifier): ≈1 μA to 100% I_o max.

MODE FLAG: A pair of panel lamps operate to indicate whether the voltage channel or the internally-sensed current channels have control of the output. A d-c "flag" signal is also provided.

CONTROL/PROGRAMMING

Voltage channel: Output voltage is controlled by a panel-mounted, 10-turn rheostat. External control can be exercised by resistance (1000 ohms per volt) or by a control voltage.

Current channel (internally sensed): Output current is controlled by a panel-mounted, 10-turn potentiometer. External control of the internally-sensed current channel can be exercised by an external potentiometer or by a small control voltage.

REMOTE ERROR SENSING: Separate voltage-sensing terminals permit 4-wire connections to a load. Will compensate for static load effects up to 0.5V per lead.

ISOLATION FROM GROUND: The circuit of the JMK is isolated from its housing and ground. It may be placed in series with up to 500 volts (d-c or peak) off ground; common mode current from output to ground: <5 μA rms, 50 μA p-p, at 60 Hz.

SERIES/PARALLEL: Terminals are provided for series interconnections of two or more JMK models. NOTE: For parallel operation of crowbar-equipped JMK units, consult factory.

DYNAMICS

Voltage recovery: The time required for a stabilized voltage to recover within the load effect band (or 2 mV, whichever is greater) for step load currents is <50 microseconds.

Current recovery: For step load voltage, the current recovery is an RC time constant assuming a value for "C" as given in the table. "R" is the load resistance. For a fast recovery current stabilizer, see the OPS groups.

Programming speed (voltage channel): JMK models slew at approximately 250 volts per second (at 50% load). For fast-programming applications, see the OPS Groups.

SOURCE POWER INPUT: 105–125V a-c or 210–250V a-c switch selected 50–65 Hz, protected by a resettable circuit breaker.

TEMPERATURE, ambient operating: −20°C to +71°C.

TEMPERATURE, storage: −40°C to +85°C.

OVERVOLTAGE CROWBAR: A voltage-triggered crowbar protection circuit is included as standard equipment on *all* JMK models. The setting adjustment and indicator are located on the front panel, together with a push button that disables the crowbar so the voltage setting can be made without upsetting the output.

Trigger time: <10 microseconds.

Setting range: 4V (min.) to 110% of E_o max.

Threshold: 5% E_o max. or 0.5V, whichever is greater. Setting should account for a −2% warm-up settling effect.

Temperature coefficient: −0.1% per °C.

TERMINALS AND CONNECTIONS: All sensing and control connections to JMK are made via a rear-mounted plug connector. A mating connector is supplied, wired with jumpers for local control and sensing. Output connections are made via rear-mounted, "5-way" binding posts. Source power connection is made via a detachable 3-wire safety line cord.

Extra plug connector, Model PC–4: $10.00 each.

DIMENSIONS: 5 7/32" H x 4 9/32" W x 19 15/16" D.

FINISH: *Panel:* Two-tone, black and light gray (Color No. 26440, Fed. Std. 595).
Case: Textured dark charcoal gray.

OPTIONS (add identifying letters as a suffix to model number):

Suffix "–T": Specify suffix "–T" for an individual certified test and report guaranteeing temperature effect coefficients.
0.005% per °C voltage mode.
0.01% per °C current mode.

Price for "–T" option: $30.00.

CC

CONSTANT CURRENT

POWER SUPPLIES

The CC plug-in modules are current controllers with built-in dual-range, current-sensing resistors and 10-turn control. They employ Kepco's monolithic linear I-C amplifier driving a self-cooled NPN series transistor-regulator. Capacitorless output filtering ensures rapid recovery from switching or load transients. Output current ranges from true zero (no minimum) to the selected range (10% or 100% of the current rating) with 10-turn resolution. Metering is isolated by means of an I-C voltage follower.

The KW is an automatic crossover, voltage/current stabilizer featuring a linear transistor *shunt* regulator functioning with a 3-phase SCR controller for exceptional efficiency. The KW has three control channels, as illustrated, a voltage control channel, a current stabilizer, and a re-entrant overload control channel. The operating mode of the power supply, a function of the load and the setting of the two controls, is signalled by means of panel-mounted LED indicators. The KW makes extensive use of plug-in linear I-C's for exceptional stability and control precision. A built-in overvoltage crowbar is standard.

VOLTAGE CONTROL CHANNEL

OUTPUT RANGE: The KW may be set or programmed over the voltage range given in the model table. For any voltage setting, KW can be operated from zero to maximum load current.

CONTROL/PROGRAMMING: Output voltage is controlled continuously through the range by a panel-mounted, 10-turn rheostat. External control can be exercised by resistance (1000 ohms per volt with a built-in calibration control) or by a control voltage. The output may be digitally controlled with an accessory Kepco type SN Digital Programmer.

REMOTE ERROR SENSING: Provision is made for a 4-terminal connnection to a load, able to compensate for static voltage drops up to 0.5 volt per lead. The voltage dropped in the power leads is subtracted from the voltage available to the load.

CURRENT STABILIZATION

The KW is equipped with a built-in current sensing and control channel for precision current stabilization with automatic crossover from and to the voltage stabilization mode.

OUTPUT RANGE: Current is controlled by a 10-turn, panel-mounted control over the range 10% I_o to 100% I_o max.

CONTROL/PROGRAMMING: Current may be externally controlled (programmed) by an external rheostat or an external resistance (5 k ohms is full scale current) or an external control voltage (5 volts d-c corresponds to full scale current).

RE-ENTRANT (FOLDBACK) OVERLOAD LIMITER: Output of the KW is bounded by a third control channel functioning as the maximum current boundary for compliance voltage less than the minimum value for current stabilization. Internally set.

MODE FLAG: KW uses three panel-mounted, light-emitting diodes (LED) annunciators to signal which mode of operation controls the output: the voltage stabilization channel, the current stabilizer, or the re-entrant foldback protector.

DYNAMICS

VOLTAGE RECOVERY FOR STEP-LOAD CURRENT:
Because the KW consists of a linear regulator combined with SCR controller, the voltage recovery time is dependent on both the size and direction of the load current step.

For a current-on step, up to 10% I_o, or a current-off step, up to 50% I_o, voltage recovery to within the load effect band (or 2 mV, whichever is greater) is less than 50 microseconds.

For a current-on step greater than 10% I_o, or a current-off step greater than 50% I_o, voltage recovery occurs in less than 50 milliseconds. Voltage overshoot amplitude for any load current-off step is limited to 0.5 volt maximum by built-in absorber circuit.

CURRENT RECOVERY FOR STEP-LOAD VOLTAGE:
A stabilized current recovers at a rate of approximately 1 second per volt of compliance change.

PROGRAMMING SPEED (voltage channel): KW models can be programmed at approximately 1 volt per second.

GENERAL

SERIES/PARALLEL: KW models can be operated together in series up to the maximum isolation-voltage. Up to 5 units can be connected in parallel. Terminals are provided for master/slave tracking and for interconnected operation of their overvoltage crowbar (necessary for parallel use).

ISOLATION FROM GROUND: The circuit and output terminals of the KW have no d-c connections to ground and may be floated up to 25 volts (d-c or peak) off ground. The common mode current from output to ground is 3 milliamperes rms, 30 milliamperes peak-to-peak at 60 Hz.

SOURCE POWER REQUIREMENTS: 208V a-c ±10%, 60 Hz ±3 Hz, 3-phase, 4-wire wye. Source power consumption is approximately 20 amperes rms per phase, 5500 watts. The KW is protected by a panel-mounted, 3-phase circuit breaker interlocked with the crowbar trip circuit. (For other source voltages consult factory.)

TEMPERATURE RATINGS

Storage: −40°C to +71°C.

Operating: −20°C to +71°C. Full output current is delivered at +71°C without derating. Cooling is by means of built-in, sealed-bearing blowers. The intake is on the right side (viewed from the front); the exhaust is to the left. Mounting should allow for air movement (generated by the blower) of approximately 500 CFM.

STANDARDS: KW power supplies are designed and tested in accord with the NEMA standard for stabilized power supplies, d-c output, Publication No. PY-1-1972.

TERMINALS: The main plus and minus output connections are 1½" x 2" (40 mm x 50 mm) plated copper plates fitted with 3/8" tapped inserts for the accommodation of lugs. Wire of 500,000 circular mills is recommended for the 600 ampere unit. Separate barrier-strips are provided for the a-c source power connection, for the crowbar connection, for the remote on/off connection and for the sensing and control connections.

METERS: The KW power supplies are fitted with separate 2-inch recessed ±3% voltage and current meters. Test points are provided on the panel for the connection of external measuring apparatus. The voltage monitor terminals are connected to the error-sensing point. The current monitor terminals are connected across the KW's current-sensing resistor; 50 mV equals full-scale current.

MOUNTING: KW power supplies can be rack-mounted in standard 19" equipment cabinets occupying 8 3/4" of panel height. The power supply's 200 lb. (90 kg) weight requires a rear support bracket in contact with the frame. The Kepco Model FSB Filler Support Brackets are suitable.

OVERVOLTAGE CROWBAR/ABSORBER

A voltage-triggered crowbar/absorber is included as standard equipment on KW models. The setting adjustment and indicator are located on the front panel together with a push button that disables the absorber so that the voltage setting may be made without upsetting the output. The crowbar/absorber circuit is in two parts.

- A self-resetting absorber circuit that clamps the output at a selected level above the output setting.
- A back-up shorting crowbar that shorts the output (and turns off the circuit breaker) should the absorber circuit be unable to contain the energy of an overvoltage.

For transients, such as load-off steps greater than 50% I_o max, the absorber will clamp the maximum output amplitude to the set value—to within 0.5 volt of the output voltage setting. More durable overvoltage stresses activate the SCR crowbar and circuit breaker and require manual reset.

A feature of the KW's crowbar is the provision for remote tripping. A "trigger" terminal is provided on the rear which can be wired to as many as five other KW units in a parallel "wired-or" configuration. Any one of these crowbars tripping, simultaneously activates all of the crowbars in the system.

Crowbar/absorber setting range: 4 volts (min) to 100% E_o max. plus 0.5 volt.

Crowbar/absorber temperature effect coefficient: 0.05% per °C.

REMOTE TURN-ON: A feature of the KW is a remote turn-on circuit. With the circuit breaker "on," the KW can be activated by application of a 115V ac, 60 Hz control signal to the provided terminals; removal of this signal deactivates the KW without tripping the circuit breaker. The remote turn-on terminals can be permanently wired from one a-c line to neutral if its operation is not desired. An alternate remote turn-off technique is to short the crowbar trigger terminal-to-common. This, however, requires that the circuit breaker be reset.

The PVS Precision Voltage Source features an extremely low drift linear amplifier driving a self-cooled NPN power transistor stage. Voltage control is by means of digitally selected (1–2–4–8 BCD) precision–low TC, high stability feedback resistors with a 3-decade oven-controlled reference. Output is displayed on a 4½ digit readout with a built-in error-detecting system to prevent false indication. Output current is metered and the limit is adjustable. A remote digital programming connector is fitted to the voltage control (BCD switch closures). The 0.02% overall accuracy qualifies the Precision Voltage Source as an instrument calibrator.

Model NTC—200 will provide the programming interface for power supplies up to 200 volts, including models in the CPS, JQE, OPS, PAT, and PCX Design Groups.

Model NTC—2000 will provide the programming interface for power supplies up to 2000 volts, including models in the ABC (Hybrid),HB,BHK,and OPS(Hybrid) Design Groups.

KEPCO NTC PROGRAMMING INTERFACE

The Kepco NTC is a power supply—to programmer interface that provides a convenient solution to the problem of mixed grounds with *common—positive* d-c power supplies. The NTC is an operational inverting amplifier which boosts a programming signal to the desired *voltage* level, then couples this signal to the noninverting voltage repeater (feedback) terminals of the power supply. By this means, the *negative* output terminal of the power supply is made electrically common to the signal source.

MODEL	d-c OUTPUT RANGE VOLTS	mA	RIPPLE rms	SLEWING RATE	MAX. INPUT AMPS at 125 V a-c	PRICE	SHIP. WGT. (lbs.)
NTC—200	0—200	0—10	0.01%*	1V/μsec.	0.25	$190.00	11
NTC—2000	0—2000	0—1	0.01%*	3V/μsec.	0.3	325.00	21

**or 5 mV, whichever is greater.*

SPECIFICATION	VOLTAGE AMPLIFIER OFFSETS ΔE_{io}	ΔI_{io}	REFERENCE (±6.2V)
SOURCE: 105—125/210—250V a-c	<100 μV	<10 nA	0.0005%
LOAD: No load — full load	<1 mV	<10 nA	——
TIME: 8-hours [drift]	<20 μV	<5 nA	0.005%
TEMPERATURE: Per °C	<20 μV	<5 nA	0.005%

Offsets and the reference contribute to output change ΔE_o, by the equation $\Delta E_o = \pm\Delta E_{ref}(R_f/R_i) \pm\Delta E_{io}(1+R_f/R_i) \pm\Delta I_{io}(R_f)$ where R_f is the feedback resistor and R_i is the input resistor from the signal reference. Use the offsets to calculate output variations when external input/feedback elements are substituted for the internal reference and voltage control in special applications.

SIGNAL INPUT: 0—1 milliampere, current driven into zero ohms. A voltage signal is connected to the NTC through a coupling resistance such that the peak input current is 1 milliampere. [Example: 0—10V signal, 10 K ohm input resistance.]

SIGNAL OUTPUT: 0—100% E_o maximum at rated current. The output of the NTC may be used directly to drive loads whose current requirements are small and can be accommodated by the respective ratings. The intended application, however, is for the NTC output to drive the voltage repeater [feedback] terminals of a suitable power supply.

OPEN LOOP d-c GAIN: $>0.5 \times 10^6$ volts per volt.

SINUSOIDAL FREQUENCY RESPONSE: [E_{pp} is the peak-to-peak voltage excursion.] $f_{max.} = \dfrac{\text{Slew Rate}}{\pi E_{pp}}$

MAXIMUM CAPACITIVE LOADING: 0.001 microfarad. Capacitance in excess of this value will slow the response, cause peaking, and reduce the stability margin. An adjustable network is provided to compensate for a small range of reactance.

REFERENCES: Two +6.2 volts [nominal] and -6.2 volts [nominal] at 1 milliampere maximum.

POWER INPUT: 105—125V a-c or 210—250V a-c [selected], 50—65 Hz, single phase.

TEMPERATURE, AMBIENT OPERATING: -20°C to +65°C.

COOLING: Convection.

ISOLATION: The output terminals are isolated from the grounded case. A maximum of 500 volts for Model NTC—200, or 1000 volts for Model NTC—2000 (d-c or peak) can be connected between either output terminal and the case.

TERMINALS: Front panel binding posts and rear barrier-strip duplicate all functions on NTC—200. The NTC—2000 has a rear barrier-strip only.

to create a digitally programmed power system

with the KEPCO

DPD DPR DPK

To create a digitally programmed power system with the Kepco DPD/DPR/DPK, the first step is to decide just how much of a complete programming system you'll actually need. Then, you need the power supply, which should be selected from among the hundred or so models in Kepco's OPS or BOP groups. The OPS models are high-speed, unipolar power supplies/amplifiers; the BOP models are bipolar.

Then, depending on the range of voltage you want to control, choose a DPD (Digital Programming Decade).

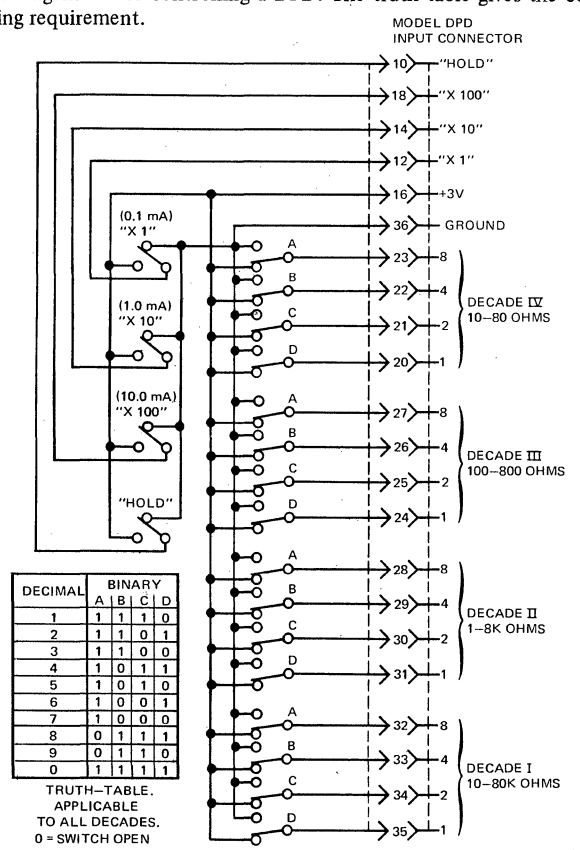
For control in the 0–10 volt range, select Model DPD–6, which offers 3½-digit resolution with three ranges.

For control in the 0–100 volt range, there's a choice:
Model DPD–5, 3½-digit resolution with three ranges.
Model DPD–2, 4½-digit resolution with three ranges.

To control power supplies in the 0–1000 volt range choose:
Model DPD–4, 3½-digit resolution with three ranges.
Model DPD–1, 4½-digit resolution with three ranges.
Model DPD–3, 5½-digit resolution with three ranges.

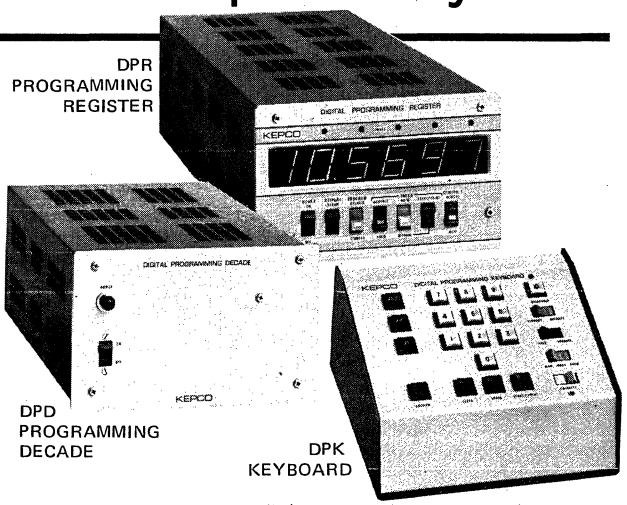
A separate Model DPD–7 is provided for controlling current. This unit offers 3½-digits of resolution with two ranges. Current is controlled indirectly, by controlling a signal which corresponds to the full scale current of the selected power supply.

If the digital signal source is—or can be arranged as—parallel data (either 3 volt logic levels or switch closures), then the selected DPD is a sufficient programmer. The figure below shows a typical switch arrangement for controlling a DPD. The truth table gives the coding requirement.

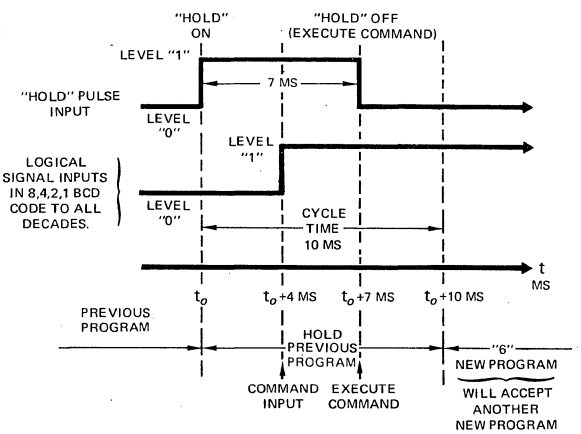


DECIMAL	BINARY A	B	C	D
1	1	1	1	0
2	1	1	0	1
3	1	1	0	0
4	1	0	1	1
5	1	0	1	0
6	1	0	0	1
7	1	0	0	0
8	0	1	1	1
9	0	1	1	0
0	1	1	1	1

TRUTH–TABLE. APPLICABLE TO ALL DECADES.
0 = SWITCH OPEN
1 = SWITCH CLOSED



To avoid switching "glitches" (overshoot or undershoot), the data signals (or switch closures) should be sequenced with a "hold" pulse which temporarily holds the previous program while the DPD is switching to a new instruction. The DPD requires approximately 10 ms to stabilize at a new level—before a new instruction can be given.



If the digital signals or data are in serial form; that is, they arrive a digit at a time as from a punched tape or keyboard, then an accumulator is necessary, one of the various DPR models. There are three of them offering 3½-, 4½-, or 5½-digit storage to work with the corresponding DPD.

The DPR features a moving index light which sequentially progresses from register to register filling it with an individual digit so as to compose a complete 3½-, 4½-, or 5½-digit numeric instruction. Normally, the index advances one space with each input—though it can be held at will to allow an operator to rapidly run through a selection of numbers for that specific digit. DPR will accept ranging instructions, will display the correct decimal place on the segmented readout, and offers such other features as a *"preview"* opportunity and an automatic stop to avoid erasing data already in storage.

The keyboard, Model DPK–1, provides a manual input for the DPR and is a recommended accessory for setting up programs outside of a machine control loop.

Together with a DPR, and DPD and, of course, a selected power supply, the keyboard provides a very effective means for keying in voltage control data. Your operator can quickly and accurately punch-up the desired number and preview it (that means you can see your program without actually controlling the power supply, allowing an edit, if neccessary). This method of selecting multi-digit numbers—or of switching between two such numbers—is much, much faster and far more accurate than knob-twiddling and frees your DVM to other more rewarding tasks.

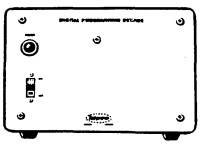
digital programming system



DIGITAL PROGRAMMING DECADE

A DPD accepts parallel data signals, generated by a switch matrix, or provided by the companion register, DPR, and selects the appropriate precision feedback resistor to control the voltage (or current) of the operationally programmable power supply to which it is connected. Three levels of control (bridge) current can also be called up from the built-in oven-stabilized reference to provide 3-decade ranging.

DATA INPUT: Four lines/digit, 1 line data transfer "hold," 3 lines ranging and common.

Logic "0": 0 to 0.3V d-c. **Logic "1":** 1 to 3V d-c at 3 k ohms.

NOTE: Switch closures, together with built-in 3V logic source can be used to create input data.

DATA OUTPUT: Selection of feedback resistance and control current for connection to an operationally programmable power supply in place of that power supply's internal reference and feedback elements.

MODEL	DPD OUTPUT RANGE "x1"	"x10"	"x100"	PRICE	SHIP WGT. lbs.	kg.
DPD–1 (4-Digit)	10.999 V	109.99 V	1099.9 V	$846.00	19	8.5
DPD–2 (4-Digit)	1.0999V	10.999V	109.99V	787.00	19	8.5
DPD–3 (5-Digit)	10.9999V	109.999V	1099.99V	899.00	19	8.5
DPD–4 (3-Digit)	10.99 V	109.9 V	1009.9 V	760.00	19	8.5
DPD–5 (3-Digit)	1.099 V	10.99 V	109.9 V	707.00	19	8.5
DPD–6 (3-Digit)	0.1099V	1.099V	10.99V	707.00	19	8.5
DPD–7 (Current)	0.1099V	1.099V	——	675.00	19	8.5

TIMING: The sequence of instructions to DPD require that the data transfer hold precede the change-of-data instructions, and persist for 10 milliseconds, so that the instructions are executed with "dry circuit" relays. This sequencing (which is built into the companion DPR) avoids switching glitches and contact wear.

OUTPUT RANGE: Each DPD will program a suitable power supply over the range shown in the chart–which includes a 10% overrange capability. The Model DPD–7, a 3-digit instrument for control of current, has two decimal ranges; all other units have three decimal ranges. When controlling current with a DPD–7, a *current code board* is required, compatible with the current rating of the power supply being controlled. Specify the appropriate current code board by appending a suffix number to the DPD–7 model, a number equal to the *ampere* rating of the supply being controlled. The code board is required for the numeric display of a companion DPR–3 to correspond to the actual current being programmed.

POWER REQUIREMENTS:
115V ±10V a-c or 230V ±20V a-c, 50–440 Hz single phase.

DIGITAL PROGRAMMING REGISTER

FUNCTION: The registers accept serial inputs of binary coded decimal programming signals, display and store them, and provide a parallel output signal to a DPD decade for the purpose of controlling a power supply. DPR–3:	12 + 1 common
DPR–4:	16 + 1 common
DPR–5:	20 + 1 common

INPUTS: Inputs may be provided by a Model DPK–1 Keyboard or other inputs, such as magnetic or punched tape or code generators.

OUTPUTS: The DPR's provide parallel output data for presentation to a programming decade of the DPD Series. Simultaneously, a readout is provided on the front panel consisting of a segmented numeric display, decimal point and index indicator. The index identifies the register next in line to receive a command.
The DPR provides the logical sequencing of its companion DPD for each command change. At the instant of switching, timing signals from the DPR instruct the DPD to "hold" while new command levels are established. This sequenced action prevents discontinuities in the output.

POWER REQUIREMENTS: 115V a-c ±10V a-c or 230V a-c ±20V a-c, 50–440 Hz, single phase.

DIMENSIONS: 5 7/32"H x 8 1/32"W x 12 7/8"D. Rack mount with RA–24 adapter.

FINISH: *Panel:* Light gray, Color 26440 per Fed. Std. 595.
Cover: Charcoal gray texture.

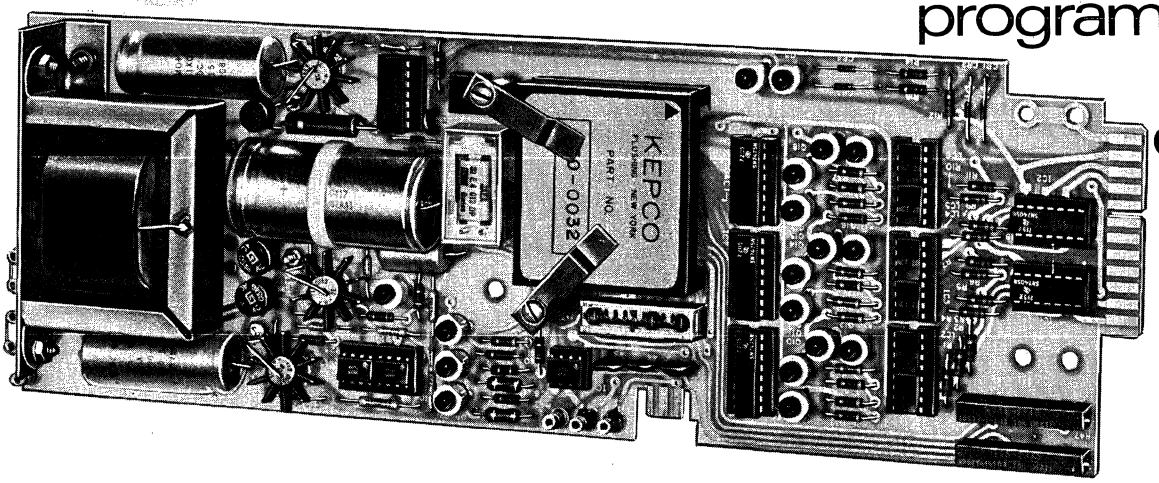
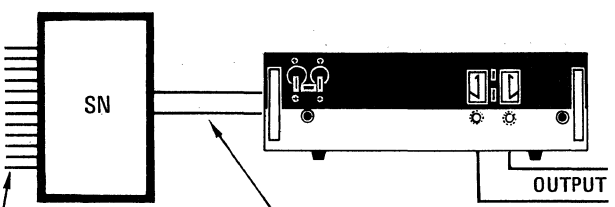
the KEPCO SN programmer on a card



The SN System for digital control of power supplies is comprised of a single printed circuit card containing a line-powered, digital-to-analog converter (DAC) isolated by means of opto-couplers from the data input lines, plus data storage facilities and analog ranging provisions.



SN's are available with 2- or 3-digit BCD input or 8-, 10-, and 12-bit binary resolution.

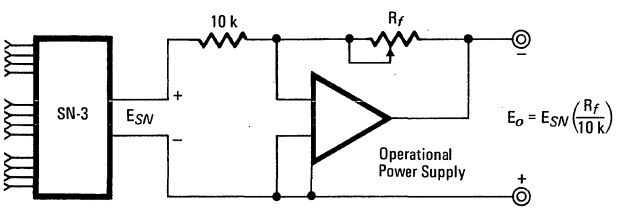
A simple 2-wire connection communicates with the selected power supply.

The selected SN (there are five units, different by reason of their resolution and data coding) can control any operationally programmable power supply—or other instrument—by producing an analog voltage (0 to 10 volts or ±10 volts) which the power supply "amplifies" as a d-c amplifier to any desired full-scale value. A big feature of the SN's is their speed: 26 microseconds (including a 6-microsecond deglitching delay). So, a logical choice of power supply would be from among Kepco's wide variety of OPS and/or BOP models, whose response to a step instruction ranges from 50 to 100 volts per millisecond up to 9 volts per microsecond! If speed is not a consideration, the SN will successfully drive any programmable conventionally filtered power supply with substantial output capacitance.

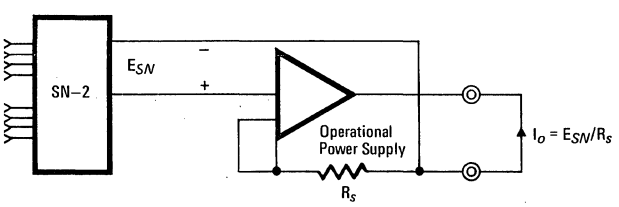
The 1000 volts of optically-derived isolation in an SN programmer allows you to ground either side of a power supply's d-c output without concern for the grounding of the digital side.

Your selection of the proper SN is based on resolution requirements and the nature of the data coding available. There are two models for binary coded decimal, SN–2 (2-digit) and SN–3 (3-digit), offering 1% and 0.1% resolution, respectively. Three binary models are also offered, Models SN–8, SN–10 and SN–12, 8-bit, 10-bit and 12-bit, respectively. (12-bits correspond to 0.0244% resolution.)

PROGRAMMING VOLTAGE WITH AN SN AND AN OPERATIONAL POWER SUPPLY



PROGRAMMING CURRENT WITH AN SN AND AN OPERATIONAL POWER SUPPLY



The binary models can be *offset* for bipolar control of the Kepco bipolar power supplies in the BOP series; This is accomplished by an internal selector which expands the range to −10 volts to +10 volts. The most significant bit (which selects half output) provides the zero selection. Resolution in either the positive half or the negative half of the output range is, therefore, reduced by one bit.

Ranging: All models contain an internal selector to provide for either 0–10 volt, 0–1 volt or 0–0.5 volt full scale output (plus the ±10 volt range available in the binary models only). This selection allows you to use an SN for the control of a power supply's current. In Kepco power supplies where the current control channel is programmable, a 0–1 volt or 0–0.5 volt signal is typically used for external control (0–1 volt for models less than 5 amperes, 0–0.5 volt for models 5 amperes and over).

Additionally, the SN–3, SN–10 and SN–12 models have a logic-programmable 10:1 range selector which can be used to provide a movable decimal point for expanded low-range resolution.

DIGITAL INPUT

DATA CONFIGURATION: 1 line/bit DTL/TTL.
Data validity: 10 microsecond minimum.
Data loading: 1 TTL load/line.

GENERAL DESCRIPTION:

The Kepco Model FG—100A is a successor to the FG—100, offering extended slow speed operation and provision for single ramp operation through the addition of dwell and retrace controls. It is an integrating-type, ramp generator, using an FET-input amplifier. Adjustable high and low sweep reversal controls permit the generation of repetitive triangular waveforms.

RANGES: The range switch selects one of six ramp rates. Panel controls allow continuous adjustment of the rates:

Symmetrical control: from 10% to 100% of selected ramp.

Asymmetrical controls: from 0 to 100% of selected ramp.

OUTPUT: 0—20 volts up to 20 mA. Built-in 2000 ohm and 20,000 ohm resistors allow for the programming of 1 milliampere (1000 ohms per volt) voltage-programmed power supplies and 10 milliampere (100 ohms per volt) voltage programmed power supplies.

LIMITS: The upper and lower ramp reversal voltages are independently adjustable by 10-turn panel controls so that FG—100A can be set up to sweep repeatedly between any two selected points. A pair of manual sweep-reversal push buttons override the panel set limits and permit you to reverse the direction of the ramp at any point in its cycle.

DWELL: A slide switch allows you to stop the integration at either the high limit or the low limit. A manual override switch allows you to stop at any point in the cycle. When stopped, the voltage output of FG—100A holds with a residual drift rate of less than 50 millivolts per hour (500 millivolts per hour for the two fastest ranges).

RETRACE: A quick retrace in either the up or the down direction may be selected by a switch. This feature allows you to quickly reset long duration sweeps.

METER: A 2½" edgewise meter, calibrated with a 0—100% logging scale—corresponding to the 0—20 volt output range (or 0—1 mA or 0—10 mA) allows you to monitor the sweep and set the limits.

REMOTES: Timing and limit-setting connections are brought out to a rear barrier-strip for remote setting. A 3-volt sync signal is available at this terminal strip for synchronizing other instruments.

SOURCE POWER REQUIREMENT: 105—125V a-c or 210—250V a-c, 50—440 Hz, single phase. ≈15 VA.

OPERATING TEMPERATURE RANGE: 0 to +55°C.

STORAGE TEMPERATURE RANGE: -40°C to +85°C.

DIMENSIONS: 4¼" H x 8$\frac{5}{32}$" W x 13$\frac{5}{8}$" D.

MOUNTING: FG—100A may be rack mounted using either RA—5 (single unit) or RA—4 (two units side-by-side) in a 5¼" x 19" rack panel. Adapter RA 24—45 allows it to fit the Kepco RA—24 hardware system.

FINISH: *Panel:* Satin finished, brushed aluminum.

CURRENT SENSING RESISTORS

These precision, wirewound sensing resistors may be used to provide a voltage drop proportional to load current for use in providing current feedback. Select a resistance to drop as close to 1V d-c as possible at the maximum desired current setting; e.g., for 0–20 ampere service, select the 0.5 ohm resistor. For best stability, the resistors should be mounted to a heat sink and/or air or oil cooled to minimize the temperature rise. Use Kepco Model KT–1304, the 1000 ohm rheostat, to provide the current feedback. All sensing resistors are 4-terminal devices with separate current and potential connections.

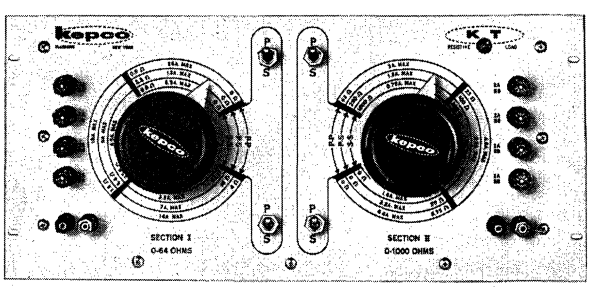
Variable Rheostat Load Bank



Model KT 6212 — Price: $650.00 — Shp. Wgt. 47 lbs.

The Model KT 6212 is a multiganged, eight-section group of dual-wound power rheostats used in the testing of regulated power supplies.

Model KT 6212 consists of two independent gangs of four rheostats apiece, 0-64 ohms and 0-1000 ohms. The rheostats can be switched for parallel, series parallel and series operation. Each rheostat has heavy and light windings so that the maximum load current changes at approximately each third rotation point around the dial.

CONTROLS:
Switches select series and parallel combinations of the four ganged rheostats with the corresponding resistance and current rating designated by concentric bands.

Each band defines the resistance range for its particular connection with zero ohms (maximum current) in the clockwise position. The bands are divided into three sections that correspond to the position of the heavy and light windings, respectively. The maximum current in each section is shown on the corresponding portion of the band.

FUSING:
Each rheostat in the 0-64 ohm gang is fused at 7 amperes. Each rheostat of the 0-1000 ohm gang is fused for 2 amperes.

TERMINALS:
A pair of 5-way binding posts is provided at each gang for connection to the power source under test. These connections are duplicated at the rear.

EXTERNAL POWER REQUIREMENTS:
None. The Model KT 6212 is a passive device.

DIMENSIONS:
8¾"H x 19"W x 13⅝"D. The Model KT 6212 resistive load is designed for mounting in standard 19" equipment racks.

The Kepco VIP (stand alone or rack mount) and the VP (bolt-on or plug-in) protectors are independently powered voltage monitors. The VIP models have provision so that they can monitor either voltage or current. A voltage excursion above the static trigger level (or below, in the case of VIP–3, the undervoltage protector) initiates crowbar conduction to clamp the supply terminals.

The VIP models provide a simultaneous relay contact break which is used to remove the a-c source power from the power supply being monitored. The VP models which are used with 20–50 watt Kepco models do not require this interlock.

Reset is accomplished by interrupting the source power.

VP–1–PX and VP–2–PX are mounted on a one-sixth width slide assembly that plugs into a single slot in such housings as RA 22–6, RA–32, CA–4 or CA–5. The VP–1–PX is a single protector, the VP–2–PX will monitor and crowbar two independent supplies.

SENSITIVITY

VIP models: 1% of the operating voltage or 0.1V.

VP model: 5% of the operating voltage or 0.25V, whichever is greater.

VIP–1 & –3 current sensitivity: 5% of the operating current producing a 1-volt drop across an external sensing resistor.

TEMPERATURE COEFFICIENT: 0.1% or 0.1V per °C (whichever is greater). Initial setting tolerance should account for the combined power supply and protector temperature and warm-up effects.

REMOTE ERROR SENSING: Compensates for up to 1 volt per output lead.

FINISH: VIP and the VP–1–PX and VP–2–PX panels are painted light gray, Color 26440, per Fed. Std. 595.

KEPCO

HARDWARE AND MOUNTING EQUIPMENT

All Kepco power supply modules can be mounted in standard 19-inch equipment housings using simple adapter panels described below. In most instances, a variety of adapter panels are offered to accommodate either a single power supply—or several together. Source power, output, and control connection must be hard-wired to the power units.

For systems and laboratory-type power supplies, two distinct mounting systems are offered:

The RA—24 System: This system consists of a mounting drawer, with provision for chassis slides, in which Kepco's quarter-rack and half-rack power supplies can be mounted. Mounting is of a semi-permanent nature, employing coarse threaded (8-18) screws into nylon expansion bushings provided for that purpose in each power supply. A variety of filler panels are available to complete the installation. The RA—24 system occupies 5¼ inches of panel space in a standard 19-inch equipment rack, exclusive of possible filler-support brackets that might be wanted to support very heavy loads. Source power may be hard-wired to supplies in modular form or supplied via a standard 3-wire line cord (see page 753 for connector patterns). D-C output and control circuits are wired to barrier-strips or binding posts—except for the Kepco JMK models which are equipped with a PC—4 connector for quick access.

The RA 22—6 System: This system consists of a mounting frame containing guides for the slip-in mounting of equipment in the one-sixth rack width format. The panels of such equipment contain captive thumb screws which fasten to the upper and lower lips of the frame. All source power, output, and control connections are hard-wired to rear-mounted socket adapter, PC—2 which mates with the male PC plugs at the rear of each unit, and which allows the individual models to be unfastened and slipped out of the RA 22—6 enclosure from the front.

Single-, dual-, and triple-slot bench housings include Models CA—3, CA—4, and CA—5, which include nondetachable plug-to-barrier-strip connections. They accept any of the OPS—II, PCX—MAT or CC plug-in power supplies, and include a line cord. Cases CA—7 (dual) and CA—8 (triple) employ detachable (type PC—2) connectors which can be interchanged with SNK—1 connectors to mount type SN digital programmers, or can be interchanged with a PC—8 connector for a cable interface.

HARDWARE FOR PLUG-IN MODELS OPS—II, PCX—MAT AND CC POWER SUPPLIES.
OPS—I, PAX and PCX models can also be mounted using BPA—22 Adapter.

FLOAT BATTERY CHARGERS

LA MARCHE

GENERAL DESCRIPTION

The model A-11 Float Battery Charger is a completely automatic, solid state, constant voltage device having:

A.C. VOLTAGE COMPENSATION — D.C. VOLTAGE REGULATION — CURRENT LIMITING

The model (A-11) charger is designed and built to carry continuous and intermittent loads up to its maximum rated output. The A-11 is current limited at 140% of rated output. Each unit is designed and built to charge a specific type of battery containing a specific number of cells.

The La Marche Transistor Controlled magnetic-amplifier circuits provide continuous taper charging. Maintains rated output voltage within ±1% from no load to full load with A.C. input variations of ±10%. Silicon diodes are used for rectification.

The model A-11 charger floats lead-acid batteries at 2.17 volts per cell and by means of a front panel switch equalizes at 2.33 volts per cell. Both float and equalize voltages are adjustable to meet battery manufacturers recommendations. This type of charging imparts the longest battery life and is the accepted method for charging batteries used in standby service.

DESIGN FEATURES

1. Quality parts throughout. Silicon diode rectifiers and transistor magnetic amplifiers used exclusively.
2. A.C. power loss relay, output voltmeter/ammeter and fused input-output are standard on all models.
3. Eighty sizes available in five input voltages.
4. Adjustable equalize and float levels; float/equalize controls located on face panel for easy operation.
5. Design and operation tested and approved by battery manufacturers, utilities, railroads and military.

SPECIFICATIONS

STANDARD ACCESSORIES SUPPLIED:

1. Potentiometer for desired float and equalize charge voltage adjustments.
2. Quality D.C. ammeter and voltmeter with 50 millivolt movement, 2% accuracy.

TIME FOR A CHANGE

In the past two years, Servotron Corporations' product line has undergone a change, from Servo-System Components to Power Supplies. To better identify with our new product line, it was felt a name change was necessary; this marked the beginning of National Products Inc.

A name change may denote many things; a new dimension in appearance and marketing philosophies, the creation of a new image, expansion of new and deletion of old products. Several of these things are taking place during our transition from old to new, but the basic concept upon which this company was originally established, (to deliver high performance power supplies which are lowest in cost and smallest in size), has been carried over. . . . Giving you the supply you need, when you need it, is your primary requirement and our most important consideration. . . .

NATIONAL POWER PRODUCTS INC.
"The company that brought you the $12.00 power supply."

ORDERING INFORMATION

Model numbers for 50 Hz and 400 Hz output inverters are obtained in the following manner:

A. Units 125VA or larger — Take the equivalent 60 Hz model (25 60 -24) and insert the number 50 or 400 in the space where the 60 appears. Therefore a typical model designation for 50 Hz is 25 50 -24 and for 400 Hz is 25 400 -24.
B. Units 60VA and smaller — Take the equivalent 60 Hz model (60 6 -24) and insert the number 4 in the space where the 6 appears. Therefore a typical model designation for 400 Hz is 60 4 -24.

Weights on 50 Hz inverters are approximately the same as the 60 Hz units; the 400 Hz inverters weigh about 25% less. Dimensions essentially remain the same.
Pricing for 50 Hz and 400 Hz inverters — add 10% to the 60 Hz price.

* These units are available with 400 Hz output only, at prices indicated.

ORDERING INFORMATION

Model numbers for 50 Hz and 400 Hz output converters 125VA and larger are obtained from the equivalent 60 Hz model (FC25 60 U) and insert the number 50 or 400 in the space where the 60 appears. Therefore the new model for 50 Hz is FC25 50 U and for 400 Hz is FC25 400 U. Units 120VA and smaller constitute Nova's Miniature line and are available only in the frequencies indicated by the asterisk.

Weights on 50 Hz converters are approximately the same as the 60 Hz units; the 400 Hz inverters weigh about 25% less. Dimensions essentially remain the same.

Pricing for 50 Hz and 400Hz convertes—add 10% to the 60 Hz price.

*These units are available with 400 Hz output only, at prices indicated.

**These units are available with 60 Hz output only.

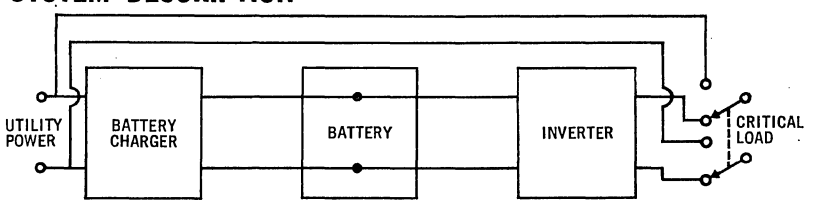
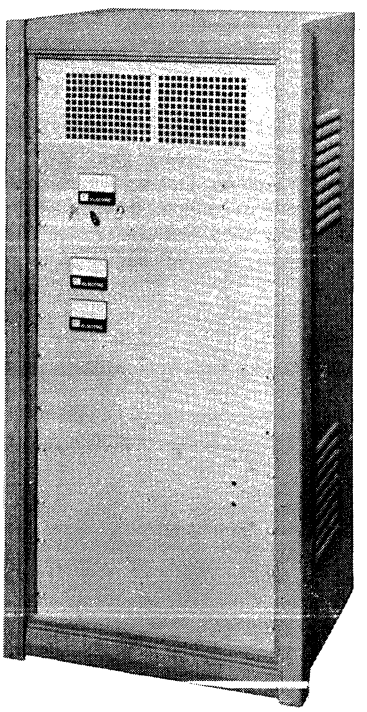
NOVA UNINTERRUPTIBLE POWER SYSTEMS

UPS NO BREAK EMERGENCY STAND BY TOTAL SYSTEM RESPONSIBILITY!!
COMPLETE SYSTEM INCLUDING BATTERY HOUSED IN ONE CABINET OR RACK
SHIPPED PREWIRED AND ASSEMBLED: READY FOR USE

SYSTEM DESCRIPTION





The system consists of four major components — battery charger, battery, inverter, and automatic transfer switch.

A. **Normal Mode** — The battery charger will float charge the battery and also supply the DC input to inverter. In this mode the load will continuously be fed quality power. The battery charger, battery and inverter filter act as buffers to absorb the voltage and frequency fluctuations on the incoming utility line.

B. **Emergency Mode** — In the event the incoming AC power line should fail, the battery charger ceases to operate and the battery instantly (without the use of switches) supplies the DC input to the inverter. During this time, the critical load continues to receive quality power from the battery through the inverter for a 15 minute period.

C. **Recovery Mode** — Upon the return of the utility AC power, the charger will automatically supply the DC input to the inverter and also recharge the battery in 8 hours.

D. **Inverter Failure Mode** — In the event the inverter output should fail, the transfer switch senses the voltage drop and transfers the critical load to the utility line.

Pacific Electronic AC Power Sources are designed for portable continuous duty production of AC power. These lightweight solid-state units provide reliable distortion free power at any of the popular power frequencies, and at other frequencies with external excitation. POWER DESIGNS INC. UNIPLY®

A LABORATORY OF POWER SUPPLIES IN A SINGLE PACKAGE

The *UNIPLY® principle involves a regulator technique that provides a general purpose power source functionally replacing four conventional power supplies.
The regulator system comprises a number of unregulated DC sources, a number of power semiconductors selected for optimum voltage and current characteristics and a single control amplifier which selects through "OR" gates that combination of unregulated source and power semiconductors that satisfy the demands of the load and the panel control settings with minimum power supply losses.
Ranging is automatic and transient-free. Operation is electronic, without relays or manual switching and utilizes linear circuits only. No triacs, SCR's or switching circuits are employed.
*Patents applied for

A built-in front panel continuously adjustable overvoltage "crowbar" in conjunction with an inhibit switch limiting the automatic ranging to 6 volts provides completely safe operation with digital circuit loads. The UNIPLY® technique permits increased power supply capability with increasing AC line voltages. Up to 150% of panel ratings is available at line voltages over 105 volts. Useful output at reduced levels is available at line voltages as low as 85 volts. A flashing panel indicator signals loss of regulation if load demands exceed the regulator capability or AC input voltages are inadequate.
Two voltage and current ranges are provided on the taut-band suspension panel meter to increase resolution. Ranges switch automatically with range switch setting.

UNI UNIVERSAL POWER SUPPLIES

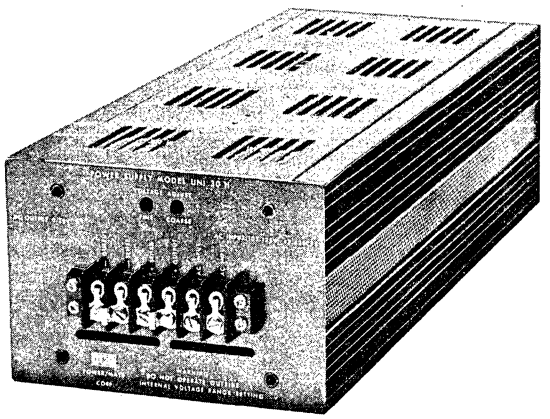
PRODUCT DIGEST

The UNI Series VARI-rated power supply modules may be operated at any range of DC output voltages and currents, so the nine units replace literally thousands of more expensive, narrow-range power supplies. Collectively, the outputs of the UNI Series cover currents from 0 to 34 amperes and voltages from 0 to 34 volts. All units are UL approved.

These power supplies are compact, rugged, mount on any of three sides, and meet Mil Spec environment requirements. They are short-circuit proof, designed for efficient operation up to 71°C without external cooling, carry a 5-year Warranty, and are significantly less expensive than narrow-range units.

THE UNIQUE UNI CONCEPT

The key to the versatility of PMC's UNI Series is an exceptional design concept pioneered by POWER/MATE CORP. It allows any UNI power supply to be set for a range of DC outputs. This adjustable feature simplifies the customer's inventory situation, and it makes possible POWER/MATE's Same-Day-Shipment policy for UNI power supplies.



SPECIFICATIONS

INPUT: 105-125V, 47-420 CPS.

OUTPUT VOLTAGE: 0-30 volts for all units except Uni-76 (0-34V); Uni-88 (0-34V); and UniTwin 164 (0-25V dual output).

OUTPUT VOLTAGE RANGE: Set in overlapping ranges by means of internal quick disconnect taps.

OUTPUT CURRENT: See chart on following page.

REGULATION: Uni-76 and Uni-88 better than ±0.005% +1MV for line and load. All other units better than ±0.01% +1MV for line and load.

RIPPLE: Less than 250 microvolts.

RESPONSE TIME: Less than 20 microseconds.

TEMPERATURE COEFFICIENT: Better than 0.01%/°C.

LONG TERM STABILITY: Better than 0.025% for 8 hours.

OVERLOAD & SHORT CIRCUIT PROTECTION: Solid state short circuit and overload protected. Instantaneous recovery, and automatic reset. Unit cannot be damaged by prolonged short circuits or overloads.

POLARITY: May be either positive, negative or floating up to 300 volts.

AMBIENT OPERATING TEMPERATURE: Continuous duty from −20°C to +71°C ambient.

STORAGE TEMPERATURE: −55°C to +85°C.

OUTPUT CURRENT vs. TEMPERATURE: Unit is rated for full current output at temperatures between −20°C and +45°C and is linearly derated from +45°C to 70% of the full output at +71°C.

REMOTE-LOCAL SENSING: Provision is included to permit remote sensing of the output voltage directly at the load for improved over-all regulation. Unit may be connected for local sensing if desired.

REMOTE-LOCAL VOLTAGE ADJUST: Output voltage may be remotely adjusted, or internally adjusted with coarse and fine controls. Both are accessible through holes in the terminal end of the supply.

MECHANICAL DATA

UNI power supplies may be mounted on any of three surfaces. They will function when mounted in any position.
10-32 screws and studs are supplied for mounting each power supply.
3½-inch and 5¼-inch rack mounting assemblies are available, along with other accessories.

EM ECONOMATE POWER SUPPLIES

PRODUCT DIGEST

Power/Mate's Econo/Mate "EM Series" power supplies are low cost modular units which are superior to any comparable power supplies available today.

The Econo/Mate power supply modules were painstakingly designed through the use of Power/Mate's computer aided "PWR-CHK" design program to insure not only 100,000 hr MTBF but also continuous full life performance to rated specifications under worst case conditions.

The Econo/Mate modules are offered at surprisingly modest prices. Their extremely low cost is attainable only through the use of Power/Mates' modern computer automated production facilities which utilize the latest numercial controlled equipment. These savings are passed along to you without sacrificing Power/Mates' high quality and reliability.

Each power supply contains self-restoring current limiting and built-in short circuit protection to limit the maximum output current available on external loads. In addition overvoltage protection is available for even further protection for each Econo/Mate unit.

Every "EM Series" power supply is thoroughly tested and backed by Power/Mates' enviable record of technical excellence.

POWER/MATE IS THE WORLD'S LARGEST SUPPLIER OF QUALITY POWER SUPPLIES

THE POWER/MATE MANAGEMENT COMMITMENT TO QUALITY IS TOTAL

POWER/MATE MEANS PEOPLE

IT Also Takes Dedication, Guts, and Backbone . . . .

That's because there is no compromise or rationalization when it comes to to shipping out a quality product. Your power supply has to meet our published standards of Workmanship and Performance or it doesn't ship.

Sometimes that hurts . . . .

But we at Power/Mate like to think we have a backbone.

When you receive a Power/Mate power supply, you know we do.

OEM POWER SUPPLIES

PRODUCT DIGEST

The POWER/MATE OEM Series of DC, regulated power supplies is available to manufacturers at liberal quantity discounts. This, combined with the fact that the OEM Series is based on the proven principles of the UNI Series, and is Underwriter Laboratory Approved, provides a quality, regulated voltage power supply that can save space, weight, and money.

One of the OEM Series space-saving features is a built-in over-voltage protection option that doesn't add a fraction to the basic module dimensions. Over-voltage protection is inside the module case, so there is no need for design changes in your product.

Complete freedom of mounting is another design advantage, by virtue of the fact that these power supplies are convection cooled. No heat sinking or forced air is required; however, substantial increases in ratings are possible with small amounts of forced air cooling.

The OEM power supplies can tolerate a wide input voltage and frequency range; therefore, they are suitable for field gear and worst-case conditions, reducing the need for special provisions.

Consider, too, that OEM units can be connected in series, parallel, or series/parallel for various outputs, and that the wide variety of POWER/MATE racks and metered or non-metered control panels and other accessories are compatible with the OEM Series. You can assemble virtually any supply system on the spot to meet your precise requirements.

POWER/MATE IS THE WORLD'S LARGEST SUPPLIER OF QUALITY POWER SUPPLIES

qual•i•ty \'kwäl-ət-ē\ *n*, a degree of excellence, a distinguishing attribute, superiority in kind.

The word QUALITY

Is one of the more mis-applied and insincerely used words in industry today . . .

That's too bad, because it's a word, when properly used, that has a lot of importance to **you** and **your** product.

We at Power/Mate, take the word at face value. We don't rationalize about a product failure. Failures are inexcusable.

At Power/Mate . . . We take Action ! ! . . . .

Thats why we thermally cycle and burn-in all power supplies a minimum of 24 hours before shipment to you.

That's why we have developed a computerized system for daily quality analysis for every power supply in production.

This analysis allows us to pin-point a potential problem and also to identify both the operator and the process and even the specific model and serial numbers of the power supplies which may be affected

That's what we call action ! ! . . . A unique and positive response to a given problem.

And that's what has made Power/Mate the leader in the industry.

PM MODULAR POWER SUPPLIES

PRODUCT DIGEST

PM Series of regulated power supplies are a 1 for 1 replacement for other manufacturers older model power supplies. Package for package power supplies are identical but the similiarity ceases there.

The Power/Mates' PM Series systems power supply design is modern and uses only the latest state-of-the-art integrated circuits and hybrids of the seventies.

The new PM Series are available to OEM users with liberal quantity discounts. Thus, the PM Series provides a high quality, power supply that saves space, weight and money. And offers a superior alternative to five year old, old fashioned power supply designs.

One of the PM Series space-saving features is a built-in over-voltage protection that doesn't add a fraction to the basic module dimensions. Over-voltage protection is inside the module case and is standard on most models.

Self-restoring current limiting and built-in circuit protection limit the maximum output available on external loads. In addition a 'fail-safe' thermal device offers even further protection for each PM unit.

The PM Series are available with the same wide variety of options as the other Power/Mate systems power supplies. Typical available options are fungus proofing with MIL-173 varnish, wide input AC ranges and rack accessories.

As with all Power/Mate power supplies, the new PM Series is backed by Power/Mate's Five Year Warranty.

PM FULL RACK POWER SUPPLIES

PRODUCT DIGEST

POWER/MATE'S expanded PM Series, an extension of our field proven PM Series Systems Power Supply Modules, now make available "Full Rack" power supplies with voltages up to 150 VDC and currents up to 150 amperes. The expanded PM Series are offered in three additional package sizes (F, G and H case), all of which set into standard 19" racks. The expanded series are ideally suited for use with digital (TTL, ECL, TRL, DTL and HTL) integrated circuits and the new MOS/LSI logic.

The PM Full Rack power supplies are offered in 42 fixed voltage range models and 4 wide range models in metered or nonmetered versions. Built-in over-voltage protection on all PM Series "H" package models is standard. Self-restoring current limiting and over-voltage protection provide complete protection. Advanced electronic circuitry limits the output current on external loads, including short circuit providing protection for the load as well as the power supply. Remote sensing, remote programming and complete serviceability are additional features.

The Full Rack PM Series offer the same wide variety of options as the systems PM power supplies. Typical available options are fungus proofing with MIL-V-173 varnish, metering, dual AC inputs, high performance option, OVP and dual primaries.

As with all Power/Mate power supplies, the Full Rack PM Series are backed by Power/Mate's Five Year Warranty.

PX MODULAR POWER SUPPLIES

PRODUCT DIGEST

Power/Mates new PX Series power supplies consist of 90 different models in 6 convection cooled package sizes. The PX Series utilizes state-of-the-art Integrated Circuit regulators and high efficiency internal heat dissipating devices to achieve their compact size and high reliability.

The PX Series are ideally suited for IC Logic and Systems applications. The new models provide DC outputs to 3.6VDC to 150VDC with currents to 40 amps. Most models contain built-in overvoltage protection. All PX Series power supplies are short circuit and overload protected. In addition, all models contain built-in "fail-safe" thermal protection devices.

Power/Mates' unique PX Series power supplies offer the same wide variety of options as other Power/Mate systems power supplies. Typical available options are fungus proofing with MIL-173 varnish, wide input AC ranges, and standard Power/Mate racks and accessories.

The PX Series power supplies are also a direct form-fit-function replacement for LXS, RS and other manufacturers older model units.

As with all Power/Mate power supplies, the new PX Series is backed by Power Mate's Five Year Warranty.

PX FULL RACK POWER SUPPLIES

PRODUCT DIGEST

Power/Mate's "PX Series" full rack power supplies are offered in over 40 fixed voltage models and 4 wide range models are ideally suited for use with any digital IC system or with MOS/LSI logic. All models are designed to set into standard 19" racks.

Built-in over-voltage protection is standard on all full rack PX Series "H" package models. Self-restoring current limiting and over-voltage protection provide complete protection. Advanced electronic circuitry limits the output current on external loads, including short circuit protection for the load as well as the power supply. Remote sensing, remote programming and complete serviceability are additional features.

The Full Rack PX Series offer the same wide variety of options as the systems OEM power supplies. Typical available options are fungus proofing with MIL-V-173 varnish, metering, dual AC inputs, high performance option, OVP and dual primaries.

As with all Power/Mate power supplies, the Full Rack PX Series are backed by Power/Mate's Five Year Warranty.

PC MODULAR POWER SUPPLIES

PRODUCT DIGEST

Power/Mate's high performance "PC" Series modular power supplies are the result of over 2 years of development and research. Power/Mate engineers followed critical design criteria in developing these new high reliability power supply modules. First, the electrical parameters were carefully designed to insure all components operate well within their own individual "worst case" condition. Second, each module was painstakingly designed for 'thermal considerations' to insure that the maximum temperature limits of each component is never exceeded. Even the individual packages were specially constructed for maximum heat transfer and dissipation.

The PC Series are completely short circuit and overvoltage protected. Any output may be shorted indefinitely without damaging the power supply. Unique Power/Mate circuitry reduces both the output current and output voltage if the full load rating of the supply is exceeded. In addition, each PC Series power supply has a "fail-safe" built-in thermostat to insure the power supply is protected in the event a malfunction should occur in any of the other protection circuitry. The PC Series power supplies will automatically restore itself to normal operations after the short or overload is removed.

The new PC Series are designed to meet the most critical performance specification including MIL-STD-810B, -454, -461, -462, -463, MIL-E-5272C, MIL-E-16400F, MIL-E-4158D, MIL-E-54001C and others.

The PC Series are available with the same wide variety of options as the other Power/Mate systems power supplies. Typical available options are fungus proofing with MIL-173 varnish, wide input AC ranges and rack accessories.

As with all Power/Mate power supplies, the new PC Series is backed by Power/Mate's Five Year Warranty.

POWER/MATE IS THE WORLD'S LARGEST SUPPLIER OF QUALITY POWER SUPPLIES

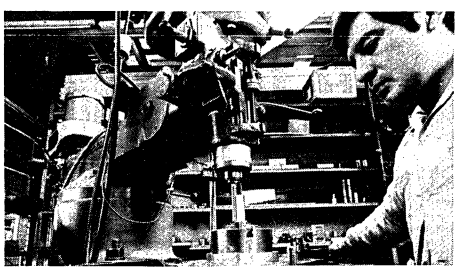
AT POWER/MATE...
QUALITY IS A SIMPLE MATTER



Simply Stated . . . "Every Power/Mate power supply must surpass its published performance specifications and conform to Power/Mate's rigid workmanship standards . . . OR . . . it doesn't leave our plant".

At Power/Mate, there is no compromise on Quality ! ! !

This high level of performance was **not simple** to achieve. It took much effort on everyone's part. Many of our employees and managers spent countless hours "burning the midnight oil". It took a total commitment to quality by everyone . . . from production to president. It means that our entire plant has to work together. It means a lot of training. It means skilled hands . . . specialized equipment . . . automated testing and much more. But it's worth it. "Because at Power/Mate we know how important it is to produce a quality power supply product".

Today we are proud of our achievements . . . We have combined a team of skilled men with machines, together with understanding, all producing power supplies you can depend on.

WR FULL RANGE POWER SUPPLIES

PRODUCT DIGEST

The new Power/Mate "WR" Full Range Modular Power Supply Series combines the field proven reliability of our Uni-Power and PM/PX Series with the benefits of our same day off-the-shelf delivery to give the Systems Engineer a new dimension in design flexibility.

Now, with the new "WR" Series, the full wide voltage ranges of these modular power supplies may be accomplished without the necessity of internal power supply adjustments or changes. The power supplies may be set at any voltage within the specified range by merely a simple pot adjustment.

Built-in overvoltage protection is optional and does not add a fraction to the module dimensions. Thus, all components are internal — no need for design changes or extra space in your product.

All "WR" power supply modules feature remote sensing and programming, built-in current limiting with automatic recovery, thermal overload protection, excellent temperature stability and may be connected in series, parallel or series/parallel for virtually any voltage and/or current output. Plus, the new "WR" Series is backed by Power/Mate's Five Year Warranty.

Accessories available for use with the "WR" Series include Power/Mate's full line of rack adapters and metered panels.

PT DUAL OUTPUT POWER SUPPLIES

PRODUCT DIGEST

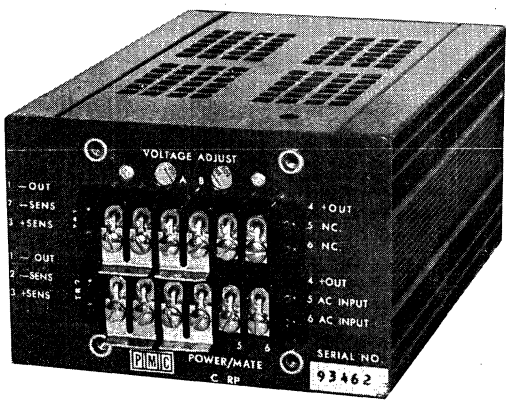
Power/Mate's new "PT" Power Twin Series are dual output modular power supplies designed for use with operational amplifiers, digital logic, integrated circuit devices and any application where + and − voltages are required.

The PT Series utilize all silicon semiconductor components for reliable operation to 71°C. Unit can be connected for (master/slave) 'series' tracking operation to keep the output voltage proportional to the master voltage, thereby reducing any input offset voltage variations of op-amps or integrated circuits due to power supply changes.

Because each output has its own individual regulator the new Power Twin (PT) Series may also be used as two separate and independent power supplies. The outputs may be connected in (master/slave) 'parallel' to give approximately twice the output current with automatic load sharing. Tracking or non-tracking feature is selectable via linkages on the printed circuit board.

All components are of the highest possible quality, computer rated for long life. The PT Series cannot be damaged by prolonged short circuit or over-loads. Each supply is isolated up to 600 VDC from output to chassis or output to output.

As with all Power/Mate power supplies, the New "PT" Series are backed by Power/Mate's Five Year Warranty.



REGULATION:
Line— ±0.05% for line variations from 105-125 VAC.

RACKS AND ACCESSORIES

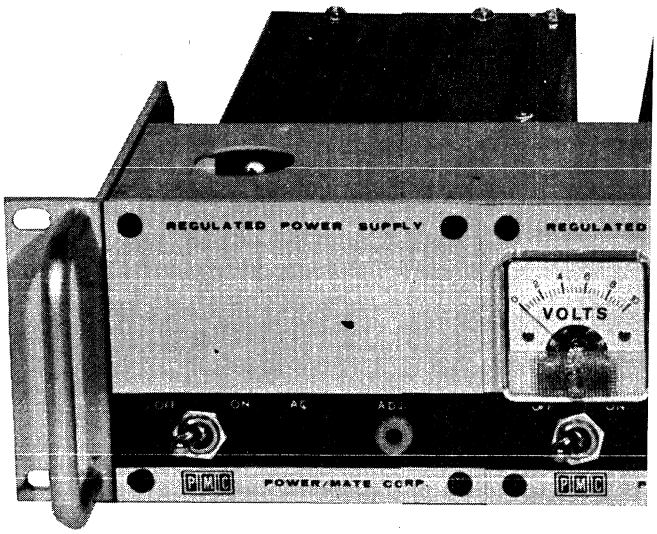
PRODUCT DIGEST

All PMC racks and accessories accommodate a variety of PMC modules in any configuration in a standard 19" rack, 3½" high or 5¼" high, with 5 different styles. All of the racks and panels are finished in durable baked gray enamel, with predrilled and tapped holes, ready for easy assembly.

THE PMC "BUILDING BLOCK" APPROACH

Because most PMC power supply modules are compatible with PMC racks, panels and other accessories, an infinite variety of combinations is possible to produce the exact requirements of the application. Assembly of a CUSTOM power supply, instead of specifying a "special order," gains the substantial benefits of lower cost and the use of industry proven and accepted PMC power supplies.

This approach also gives the engineer a new dimension in design freedom. He chooses from readily available, off-the-shelf, standard modules (at standard prices), and from matching off-the-shelf mounting racks, metered and non-metered control panels, in addition to the complete assortment of other accessories.



PANELS

HOW TO ORDER PANELS: Select desired voltmeter range and ammeter range from listing below. Insert voltmeter range selected in first bracket, followed by ammeter range. For example, a CPM-525-36-1.5 indicates a metered quarter rack panel with a 0-36 voltmeter and a 0-1.5 ammeter.

RACKS AND ACCESSORIES

HOW TO SELECT RACKS TO FIT YOUR MODULES

1 Select the POWER/MATE power supply modules which will satisfy the electrical requirements of your application.

2 From TABLE A, list the effective width and depth of each module selected. Arrange in a list so that the effective width can be readily added up.

3 To make the general applicable rack selection, compare the models selected in Step 1 with the module types shown for each type of rack from TABLE B.

4 Add up the effective width of the modules from Step 2. Also note the maximum effective depth of the modules.

5 Check the maximum effective depth of the modules against the depth shown in TABLE C. This will indicate if the maximum effective depth is within the capacity of the rack type selected.

6 Next, compare the total module width and the width dimensions in TABLE C for the selected rack type. This will determine if the total effective width of the power supplies required will fit within the rack.

If the total module width is larger than that of the rack selected, then two choices are available: a) use two racks, or b) place more than one similar case width power supply (See TABLE A) in tandem. For example, two B cases with an individual depth of 7½ can readily fit in the 19⅜ depth of the AR525-21 rack.

HV/HW HIGH EFFICIENCY POWER SUPPLIES

PRODUCT DIGEST

Power/Mate's new HV/HW High Efficiency Power Supply Series, utilizes Power/Mate's "SIMAG" circuitry (patent pending), a breakthrough in power supply design and is the result of a development program to provide high efficiency power supplies for use with digital (TTL, ECL, TRL, DTL, and HTL) integrated circuits and MOS/LSI logic.

The new HV/HW series operates at efficiencies greater than 50% and are offered in a wide range of voltages up to 150 VDC with current ratings up to 200 amps.

Power/Mate's unique mechanical and electrical design allows the power supplies to be packaged in almost half the space required for equivalent conventional series power supplies.

Built-in overvoltage protection and self-restoring current limiting provide complete protection. Advanced electronic circuitry limits the output current on external loads, including short circuit providing protection for the load as well as the power supply. Remote sensing, remote programming and complete serviceability are additional features.

The HV/HW Series are backed by Power/Mate's Five Year Warranty.

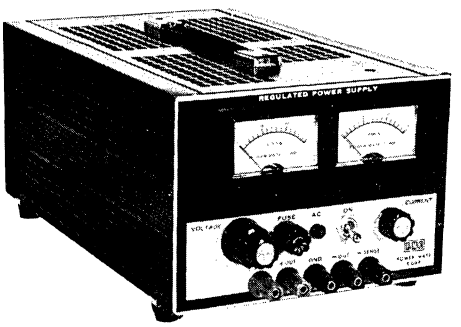
BP LABORATORY POWER SUPPLIES

PRODUCT DIGEST

The POWER/MATE Bench Pac (BP) line of laboratory power supplies consists of 23 different models. This versatile group of DC bench units, voltage and current regulated, can meet every laboratory and systems power supply requirement, offering a complete range of outputs from 0 to 60 volts with currents up to 15 amperes.

Special features of the UniPower Bench Pacs include: high accuracy, adjustable current limiting, concentric controls for course and fine voltage adjustment, constant voltage and/or constant current, front panel remote sensing of output voltage (Models "E" through "H"), AC indicator, on/off switch, five-way binding posts, easy-to-read dual meters, and the added feature of built-in short-circuit protection.

Low in cost and high in performance, these general-purpose bench supplies employ the same field-proven designs and state-of-the-art solid state silicon circuitry found in POWER/MATE's UNI Series and OEM Series power modules. The UNI concept provides a combination of mechanical and electrical maximum reliability features, and the Bench Pacs carry the full 5-Year POWER/MATE Warranty.



REGULATION —
Load: The regulation for load changes is less than .01% +1 millivolt, whichever is greater from no load to full load.

Line: The regulation is less than 0.01% +1 millivolt, whichever is greater, for a line change from 125V to 105V at constant load.

RIPPLE: Less than 250 microvolts.

SPECIFICATIONS

INPUT: 105-125 Volts, 47-420 cps, single phase.

OUTPUT VOLTAGE AND CURRENT: See Respective Tables.

REGULATION —

Load: The regulation for load changes is less than .01% +1 millivolt, whichever is greater from no load to full load.

Line: The regulation is less than 0.01% +1 millivolt, whichever is greater, for a line change from 125V to 105V at constant load.

RIPPLE: Less than 250 microvolts.

TRANSIENT RESPONSE: For a ±10 Volt step change in line voltage, or for a no load to full load, or a full load to no load step change, the output voltage will return to within 10 millivolts of the regulated region in less than 20 microseconds.

METERS: Voltmeter and ammeter, rated accurate to 2% of full scale value, are provided on the front panel.

POLARITY: The output may be "floated" up to 300V peak above ground. Either polarity may be grounded to chassis by means of terminals provided.

CONSTANT CURRENT, CONSTANT VOLTAGE: Constant current and constant voltage levels may be preset within the maximum rated voltage and current levels specified in appropriate tables. The intersection of the constant voltage and constant current operation lines called the "Crossover Point" may be located anywhere within the output volt-ampere range of the unit. Regardless of the demands of the load, the output voltage and/or the output current will never exceed the limits (1% or better) preset by the output voltage and output current controls.

CONTROLS —

Voltage: Continuously variable coarse and vernier DC OUTPUT ADJUST potentiometers on concentric shafts provide variable DC Output.

Current: Continuously variable single turn potentiometer provides current limiting adjustment.

TEMPERATURE COEFFICIENT: Better than 0.01%/°C.

LONG TERM STABILITY: Better than 0.025% for 8 hours.

DUTY: Continuous at ambient temperatures from 0°C to 50°C. Operation above 50°C is allowed provided the output current is derated 20% for every 10°C rise above 50°C.

REMOTE SENSING: Sensing terminals, separate from the Output terminals, provide sensing and load regulation against the voltage at the load rather than the voltage at the power supply output terminals. This eliminates the otherwise unavoidable load regulation due to the voltage drop in the wires connecting the supply to the adjacent load.

REMOTE PROGRAMMING: The output voltage may be controlled accurately from a remote point if desired by inserting a resistance across the REMOTE PROGRAM terminals. The sensitivity of this circuit is approximately 100 ohms per volt.

PARALLELING: Two or more units may be operated in series to provide higher voltage output at rated current. Units of the same voltage and current ratings may be operated in parallel.

PROTECTION: Load and power supply protection for any overload condition is accomplished by an adjustable electronic current limiting circuit controlled by a front panel potentiometer.

AIRFLOW: All units are convection cooled and do not require internal blowers or depend on internal forced air cooling.

INSPECTION: MIL-Q-9858 Procedures.

MECHANICAL DATA

FINISH: Front panel is finished with dual tone grey and black baked enamel. Panel marking is grey. All other finishes are appropriate paint, plating, or chemical film as required.

MOUNTING: Units are designed for bench operation, however, rack adapters are available
Consult factory for special systems configurations.

ACCESSORIES: Bench Pacs can be rack mounted as required. Up to three Series "C," or two Series "D" power supplies will mount in a standard 19" rack, just 3½" high.

PRODUCT DIGEST

Power/Mate's new Power Rack "PR" Series, high current power supplies, consist of 16 different models in three all convection cooled package sizes (HM, K and L packages). The "PR" Series are both voltage and current regulated and can satisfy virtually every laboratory and systems power supply requirements. A complete range of outputs from 0-60 VDC with currents to 100 amperes are available as standard models.

Special features of the "PR" Series include high accuracy, adjustable current limiting, concentric controls for course and fine voltage adjustment, constant voltage and/or constant current, remote sensing, large easy to read precision meters and built-in short circuit and overload protection. FPS FERRORESONANT POWER SUPPLIES

PRODUCT DIGEST

FPS Power Supplies use PMC's uniquely designed "MAG-POWER" ferroresonant power transformer to provide simple, efficient and economical operation. They deliver more power-per-penny than conventional units. FPS Series units supply DC outputs from 5 to 60 volts with currents to 75 amps. The inherent simplicity of design of these supplies greatly increases the reliability. All components are conservatively rated to further assure optimum performance.

Efficiency is high, in the area of 70-90%. Typical reliability is more than 150,000 hours MTBF. Quality features include built-in limiting for over-voltage and over-current, short circuit protection, and all-silicon semiconductors.

The FPS units, which operate in series or parallel, may be used with many of the standard POWER/MATE racks and metered accessories. This makes the FPS Series compatible with all other PMC supplies to produce a uniquely tailored power supply system to suit your demands.

MM MINIATURE POWER SUPPLIES

PRODUCT DIGEST

The Power/Mate "Mini/Mate" Series regulated power supplies are a minature encapsulated series of DC power supplies which, in addition to their high performance qualities, are ultra-reliable, compact, rugged and moderate in price.

All Mini/Mate encapsulated power supplies are "potted" with an aluminum oxide filled epoxy. This is among one of the many superior construction techniques which allow higher heat conduction to insure highly reliable operation and virtually any environmental condition.

The Mini/Mate Series contain both AC to DC and DC to DC power supplies, and are available with either single or dual outputs. The output voltage and current ranges of the Mini/Mate Series provide the user with maximum versatility. Over 165 models are available in voltages from 3.6 Vdc to 200 Vdc with current to 2 amp. The Mini/Mates are particularly appropriate for use in today's modern applications. Common uses for the Mini/Mate Series are the power Operational Amplifiers, Digital Logic, Shift Registers, ROM's, RAM's, A to D converters, D to A converters, and other signal conditioning instrumentation.

The Mini/Mate Series are packaged in either the standard rectangular case or Power/Mate's new space saving "Mini-Square" module that saves PC board area for more compact designs.

Whatever your choice, AC to DC, DC to DC, encapsulated or plug-in, each of these miniature DC power supplies is backed by Power/Mate's world-wide reputation for power supply excellence.

MM MINIATURE POWER SUPPLIES

MINI/MATE DC TO DC CONVERTER — DESCRIPTION

Power/Mate's new DC Series dual output DC to DC converters is the result of Power/Mate's engineering development program to offer the OEM user a full line of high efficiency, low cost DC to DC power supplies.

These new units are designed for use in application that requires precise regulation from a DC source. The DD Series are ideally suited for use with brute force High Current DC power sources such as Power/Mate's FPS Series ferroresonant power supplies. By combining the advantages of a pre-regulated DC input, the DD Series converters provide isolation, high efficiency and excellent point of load regulation.

The mechanical design is compatible with today's PC Board pin spacing for proper mating with standard logic cards and op amps.

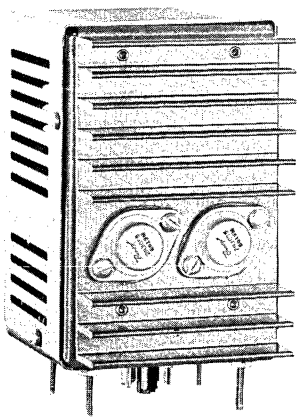
The RA and RB Series of modular power supplies provide regulated voltage outputs between 0 and 400 volts at output currents up to 25 amperes, at regulations of 0.05 or 0.5%, according to the model selected.

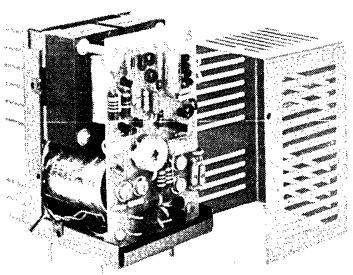
Silicon semiconductors are used exclusively in the power supply circuitry. This together with the internal heat sinking provided in the supply enables full load operation of the unit at ambient temperatures of 71°C without any additional cooling, heat sinking, and without derating.

The RA and RB Series power supplies are completely short circuit proof. The output may be short circuited indefinitely without damage. A unique circuit reduces the output current and voltage if the full load rating of the supply is exceeded. This not only protects the power supply, but serves to protect the load against further damage due to excessive current flow. The power supply automatically restores itself to normal operation after the short or overload is removed.

All components are accessible and replaceable in the field if required. All components are conservatively rated and are of the highest quality. For example, the electrolytic capacitors are 85°C types and the transformers are MIL-T-27 quality.

Connections at the connector permit either internal or remote adjustment of the output voltages. External connections also permit the remote sensing of the voltage directly at the load for improved overall load regulation on the RA Series.





REGULATION: ±0.05% or 2 MV (whichever is greater) vs line and load for RA Series; ±0.5% vs line and load for RB Series.

RIPPLE: Less than 0.002%, or 1 MV RMS (whichever is greater) for RA Series; 0.01% for 5 MV RMS for RB Series.

SPECIFICATIONS

INPUT: 105-125 VAC, 47-420 CPS.

OUTPUT: See Specific Model Listed.

REGULATION: ±0.05% or 2 MV (whichever is greater) vs line and load for RA Series; ±0.5% vs line and load for RB Series.

RIPPLE: Less than 0.002%, or 1 MV RMS (whichever is greater) for RA Series; 0.01% for 5 MV RMS for RB Series.

RESPONSE TIME: 50 Microseconds.

OPERATING AMBIENT TEMPERATURE: −20° to +71°C.

TEMPERATURE COEFFICIENT: 0.015%/C or 1.8 MV, whichever is greater.

OUTPUT ADJUSTMENT: Either internal or external as desired.

COOLING: None required at specified ambients.

POLARITY: May be either positive, negative, or floating (up to 300 volts).

OVERLOAD PROTECTION: Solid state short circuit and overload protected, instantaneous recovery and automatic reset.

MEAN TIME BETWEEN FAILURES: 100,000 hours typical, calculated according to MIL Handbook 217A.

MILITARY SPECIFICATIONS: Designed to meet the environmental requirements of MIL-E-5272, and RFI requirements of MIL-I-6181.

OPTIONS

OVER-VOLTAGE PROTECTION: Additional charge 20% ($35.00 min.).
Solid-state crow-bar protection for voltage sensitive loads is available for all RA and RB models. Trip point of crow-bar is adjustable. The addition of crow-bar circuitry generally requires next larger case size for N & R case supplies. Larger units can generally accommodate crow-bar circuitry. Consult factory for confirmation of case size when ordering. Add suffix V to model number when ordering.

CLOSE REGULATION: Additional charge $10.00.
Regulation accuracies of ±0.01% for line and ±0.025% for load are possible for the RA Series. When ordering add suffix A to model number.

208 or 230 VOLT INPUT: Additional charge 10% ($15.00 min.).
All modules can be modified to accept inputs of 208 or 230 volts, ±10%. Add the suffix L for 208 volts, and LL for 230 volt operation.

SOLDER TERMINALS: Additional charge $5.00.
A solder header is available for any model normally supplied with an octal plug.

ACCESSORIES

PANEL & CHASSIS MOUNTING ADAPTER: This adapter permits any standard **POWER/MATE** module to be surface mounted to either a chassis or panel. Includes socket. Order part no. A200- (—). Follow model no. with module case size with which adapter would be used. Cost — ANY TYPE $4.75.

RC, RD PLUG IN POWER SUPPLIES

PRODUCT DIGEST

All Silicon Semiconductors Throughout.

All Units Rated for Continuous Duty at —20° to +71°C Ambient

Short Circuit Proof — May be Shorted Indefinitely without Damage.

Automatic Overload and Short Circuit Recovery.

No External Heat Sink or Cooling Required up to +71°C.

MTBF — Over 100,000 Hours.

All Components Accessible and Replaceable for Maintenance.

Top Quality Components and Rugged Construction.

All Power Supplies Subjected to Rigorous QC Inspections.

The RC and RD Series of module power supplies are low cost units that feature the same high quality construction and components used in our other series of power supply modules. The regulation and ripple listed in the specifications are adequate to permit their use in all but the more critical applications. The low cost of these modules is the direct result of the wide acceptance that these modules have found throughout the industry. All of the modules listed are available from stock.

Silicon semiconductors are used exclusively in the power supply circuitry. This together with the internal heat sinking provided in the supply, enables full load operation of the unit at ambient temperatures of 71°C without any additional cooling, heat sinking, and without derating.

...All components in the supply are readily accessible by removing the cover, and are replaceable in the field should it ever be necessary. Components are conservatively rated. Electrolytic capacitors are 85°C types, and the transformers is MIL-T-27 quality.

REGULATION: See specific model rating.

RIPPLE: Less than 4MV (RMS) for RC Series.
Less than 8 MV (RMS) for RD Series.

The RC and RD Series modules are completely short-circuit proof. A solid-state current fold-back circuit makes the unit immune to overloads or short circuits. The unit automatically resets when the overload or short is removed.

All of the RC and Rd Series modules are housed in a rugged 3¼ x 3¼ x 5" (R style case) with a standard octal plug for the input output connections.

SPECIFICATIONS

INPUT: 105-125 VAC, 47-420 CPS.

OUTPUT: See specific model rating.

REGULATION: See specific model rating.

RIPPLE: Less than 4MV (RMS) for RC Series.
Less than 8 MV (RMS) for RD Series.

OPERATING AMBIENT TEMPERATURE: —20° to +71°C.

OUTPUT ADJUSTMENT: Adjusted by means of internal pot.

COOLING: None required within specified ambients.

POLARITY: May be either positive, negative or floating up to 300 volts.

OVERLOAD PROTECTION: Short circuit protected, autoreset.

HOW TO USE eem

electronic engineers master

1973-74

Need directory information?

EEM contains four complete directories which provide the most up-to-date information available. These directories are listed and described at the right. They appear in all three volumes, with the exception of the Trade Mark Directory which appears only in Volume 1. Directory references to Volume 4 indicate the 1973 edition, which you received in January. That copy of Volume 4 should be retained to complete the 4-volume set.

Add Volume 4/1973 to your copies of Volumes 1, 2 and 3 to make a complete set of **EEM** for 1973-74.

Included in this volume are:

The Product Index and Directory

The Product Index and Directory (green section, page 9) lists more than 6,000 types of electronic products alphabetically, by product. Under each product heading is a complete, alphabetical listing of manufacturers who make that product. **Bold face** listings indicate which manufacturers have provided catalog data on that product in the white pages.

The Manufacturers and Sales Office Directory

The Manufacturers and Sales Office Directory (starts yellow section of each volume) lists more than 3,000 manufacturers of electronic components, materials, instruments, assemblies, systems, and key services. Provided are complete addresses, phone numbers, sales managers' names, names of application engineers, TWX numbers where applicable, selected distributors. **Bold face** listings indicate that manufacturers have provided catalog data in the white pages and that sales offices are listed.

The Distributor Directory

The Distributor Directory (yellow section, page 1594, with black edge marking) lists more than 1,000 electronic distributors and branch locations, alphabetically by distributor's name, geographically by state and city.

Need catalog information?

For complete catalog information on any product, refer to the Product Index and Directory (green section, page 9, all volumes) which provides a complete listing of all the manufacturers who supply a particular product. Those manufacturers listed in bold face with page and volume number references have provided catalog data on this product in the catalog section (white pages) where you can find the information you need. References to Volume 4 indicate the Volume 4 you received in January and which should be retained to complete your 4-volume set of EEM.

Need additional information in a hurry?

Two special telephone services are being maintained for EEM users to provide extra information you need. If you need to determine a local source of supply, just **D.I.A.L. EEM.** This toll-free service (**D**istributor **I**nformation **A**nd **L**istings), provides you with the name of a sales office or distributor in your area who can provide a needed product.
For up-to-the-minute listings of manufacturers who provide certain IC functions, **call the IC UPDATE HOTLINE.** Listings of IC functions are updated daily by manufacturers throughout the country. For information in a hurry, **just D.I.A.L. EEM** — call toll-free 800-645-9200 (in N. Y. State call collect (516) 294-0990). Or **call The IC UPDATE HOTLINE,** Dial toll-free 800-645-9201.

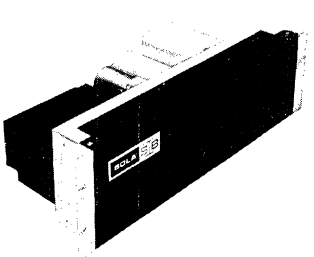
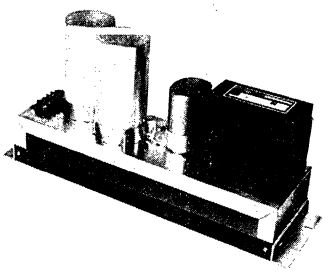
SOLA CVDC POWER SUPPLIES

SOLA offers a wide range of CVDC type power supplies. These standard designs, available in any quantity, are the result of SOLA custom engineering efforts.

Highly reliable, the CVDC supplies are ruggedly built and use simple circuitry. Fast, dependable regulation, current limiting, and high efficiency are provided by the heart of the supply: the famous SOLA Constant Voltage Transformer.





CHARACTERISTICS

- Fast, dependable line-voltage regulation: within ±1% for fluctuations of ±15%; voltage will return to regulation envelope in approximately 50 milliseconds.
- Load regulation: from ½% to 8%, one half to full load.
- Automatic current limiting: short circuit protection; withstands load faults; high overloads cannot damage power supply of equipment components.
- High efficiency: upwards of 75%; low input-power requirements.
- Simplified operation: no adjustments or maintenance; continuous duty.
- Convection cooling.
- Ripple: 1% rms maximum.
- Ambient operating temperature: 50° C maximum.
- Constant-voltage Sola transformer provides ±1% regulation for line voltage variations as great as ±15%, serves as the heart of CVDC power supplies for voltage-sensitive equipment.

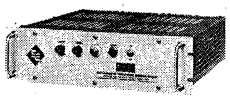
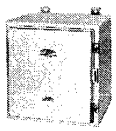
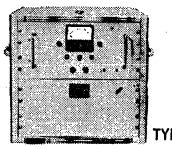
STABILINE® *automatic VOLTAGE REGULATORS*



TYPE IES9101





TYPE EMT10228

TYPE EMT4115B

Deliver a constant output voltage regardless of variations in input voltage or changes in line current. Types available from 0.25 to 275 kva. Submit specifications for ratings desired but not given in the charts. Input voltage ranges shown are at nominal output voltage; input range shifts with output voltage setting.

EMT SERIES – Electro Mechanical Transistorized types with virtually zero waveform distortion, 47-63 hertz frequency range, very low internal impedance, negligible phase shift and efficiency approximately 99%. Rated accuracy ±.75% for all line voltage or load current variations within unit stated range. Insensitive to load magnitude and power factor; no effect on system power factor.

EMS SERIES – Electro Mechanical Transistorized types for heavier load requirements. Same operating characteristics as EMT Series. Units with letter I before first digit in type number have individual control for each line-to-neutral voltage.

EMK SERIES – Electro Mechanical Transistorized types providing faster correction times than other electromechanical models.

IES SERIES – Instantaneous Electronic Solid-State types having extremely fast correction, no moving parts. Will maintain output voltage within a 100 millivolt rms band for any combination of rated input voltage and/or load from 1.0 to 0 power factor lagging. Efficiency to 95%. All units have provision for remote sensing and have plug-in solid-state circuit boards.

MILITARIZED – Meet requirements of applicable military specifications. Type EMTH41007MH is 3½ x 6 x 4½"; type EM4108MCR fits standard 19" relay rack. Accuracy ±1.0%.

STABILINE®

Full Range REGULATOR CONTROLLERS

Designed for use with any motor-driven POWERSTAT Variable Transformer to provide full range regulation of a-c voltage, a-c current or d-c voltage. Output voltage will remain within a 2-volt band when used with 120 volt units and a 4-volt band when used with 240 volt models. Output current can be maintained within ±1% of maximum current setting with user supplied current transformer and Superior Electric transformer T6340. Type FR501DC and user supplied d-c power will provide regulated d-c voltage.

PTM DUAL SERIES

Ideal for applications requiring compact, dual-output DC power supplies. Designed for space-savings; more compact than competitive series-pass units. Nine models, all with common AC voltage inputs and two regulated DC voltage outputs — one positive and one negative with respect to common terminal. Outputs are individually adjustable, dual tracking with the negative output acting as the master. Units designed for installation flexibility: front panel positioning vertical or horizontal; side, base or cantilever mounting. Components used in the PTM Dual units are highest quality, include ceramic, hermetically sealed integrated circuits, plug-in power transistors and computer-grade capacitors.

COMMON DATA — ALL UNITS

1. All models are programmable both in voltage and current modes, by resistance and voltage signal. **2. Ripple** and transient specifications apply at 60 Hz and will vary by a factor of $(60/f)^2$ where "f" is the input frequency. **3.** Optional auxiliary chassis permits operation from 342-418, 390-440, or 414-506 Vac input: ST101. **4.** Models factory-wired for a nominal 460 V input, but may be field or factory modified to accept alternate inputs.

Alternate inputs (with voltage derating, if applicable) for DCR40-250A, DCR150-70A, DCR300-35A, DCR600-18A are: 187-229 Vac, 57-63 Hz, 100% Eo Max. 207-253 Vac, 57-63 Hz, 100% Eo Max. 342-418 Vac, 47-63 Hz, 90% Eo Max. 390-440 Vac, 47-63 Hz, 100% Eo Max.

Alternate inputs (with voltage derating, if applicable) for DCR20-1,000A and DCR40-500A are: 342-418 Vac, 47-63 Hz, 75% Eo Max. 390-440 Vac, 47-63 Hz, 92% Eo Max.

5. Overvoltage protection available as standard or optional feature. Contact local representative or factory for details.

OUTPUT VOLTAGE: Continuously adjustable over entire range from zero to rated voltage by means of ten-turn potentiometer. Resolution better than 250 ppm. Finer resolution available on special order.

INPUT VOLTAGE: 105-125 Volts AC, 55-65 Hz, single phase. Other inputs available on request.

REGULATION: Load: 0.01% +1V, for full load change. Line: ±0.01% ±1V, for ±10% change.

RIPPLE: 0.02% +2 volts, RMS. 0.1% RMS on 100KV models and above.

POLARITY: Positive, Negative, and Reversible with respect to ground available.

STABILITY: 0.02% +2 volts per hour, 0.05% +5 volts per eight hours.

TEMPERATURE COEFFICIENT (PER °C): 0.02% +2 volts.

TEMPERATURE RANGE: Operating: −20°C to +55°C
Storage: −40°C to +85°C

OVERLOAD PROTECTION: All units are overload, short circuit and arc protected by means of fast acting, self-restoring, electronic circuitry. Other protection options available. (See above.) Surge limiting resistors included.

AC POWER INPUT PROTECTION: Control Fuse.

CONTROLS: AC ON Toggle Swtch. AC ON Indicator. Output Adjust — Ten-turn potentiometer with locking read-out dial.

METERING: Single range voltmeter, 2% accuracy, Single range ammeter, 2% accuracy.

PHYSICAL CHARACTERISTICS: All units in this series up to 100KVDC output are designed for rack mounting. Panels are 19″ wide with standard notching. Units are fully enclosed for desk or table top operation. Optional bench mounting cabinet available. High voltage sections of higher voltage units are contained in a plexiglas tubular enclosure mounted on a base cabinet. The high voltage electrode is located at the top of the structure.

OPTIONS:

OVERLOAD TRIPOUT (OL): The Overload Tripout protection feature rapidly "crowbars" the power supply when the load current exceeds approximately 110% of the rated load. The power supply must be reset by OFF-ON activation of the main AC power switch. This protection arrangement provides the utmost in safety for personnel, load, and power supply.

CURRENT LIMITING (CL): This option automatically limits the load current to approximately 110% of rated load regardless of the overload imposed upon the power supply. The power supply continues to operate at any overload condition including a short circuit by automatically reducing the output voltage as required to maintain the current limit. The unit is self-restoring to its normal operating level when the overload condition is removed.

REMOTE VOLTAGE PROGRAMMING (RVC): This option enables the power supply to be controlled by an external low voltage DC source. The output voltage is directly proportional to the input voltage with linearity and proportionality of 1% of full scale.

REMOTE RESISTANCE PROGRAMMING (RC): This option permits the output voltage to be controlled by either an external potentiometer (3 terminals) or the front panel 10-turn control potentiometer.

BCD DIGITAL REMOTE PROGRAMMING (BCD): This option is supplied in the form of a separate programmer adaptor with all necessary connectors and cables for interconnection to the basic high voltage power supply. The programmer module is designed for rack mounting in standard 19″ wide cabinetry. It is 3½″ high and 6½″ deep.

All standard RHR characteristics for regulation, ripple, etc. are not affected by the addition of the programmer module.

BENCH CABINET (C): A deluxe styled rack cabinet is available for all models.

CURRENT REGULATION (CR): The RHR Series units are capable of being modified from their normal constant voltage operating mode to a constant current mode.

This type of unit is particularly suitable for gas laser excitation since the supply can provide a relatively high open circuit voltage for starting the plasma discharge. Once the arc has formed, the supply automatically operates in a constant current mode at any preset level.

220 VOLT INPUT (50-60 Hz) (220): Nominal input voltage between 220 and 250 volts RMS, 50-60 Hz, single phase can be accommodated with this option. Input current is approximately 1.5, 3 and 5 amperes RMS for 30, 60 and 120 watt models respectively.

FOCUS TAP (F): A separate, supplementary output can be included in all models up to 40KVDC. The auxiliary voltage is obtained by including a DC to DC supply selected from the SPELLMAN RM SERIES modules. Any 1.5 watt unit with voltage rating to 24KVDC may be selected.

REMOTE MONITOR TERMINALS (TP): BNC connectors are provided on the rear of the chassis for remote monitoring of voltage and current.

REMOTE CONTROL PANEL (RCP): Any standard model may be supplied with the control panel removed from the basic supply.

PARALLEL OPERATION (PM): Any model in the RHR SERIES can be used as a "master" controller for parallel operation of up to three "Slave" units of the same rating from either the RHR or UHR Series. Whether the "slave" units are from the RHR or UHR units, the overall characteristics of the parallel system are governed by the specifications of the RHR "master" supply and are the same as standard specifications.

SLAVED BI-POLAR (±) OPERATION (BPM) and (BPS): Any positive polarity model in the RHR Series can be used as a "master" for "tracking" control of the negative polarity equivalent RHR model. Thus, one control provides adjustment of both supplies from zero to rated output voltage.

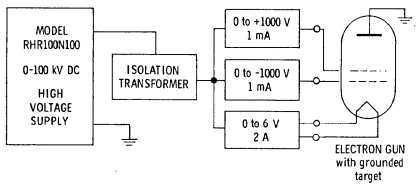
* FRHM models are adjustable from zero to rated voltage by external potentiometer connected to a 3-position terminal strip.

† UHM models are adjustable from zero to rated voltage by proportional control of input voltage from zero to 24VDC or 115VAC.

‡ All 30 watt modules are convection cooled by internal fan. Standard units require 115V, 50/60 Hz to operate the fan. Thus, for DC input models, a separate 100VA AC source must be supplied for the fan. As an option, a DC fan can be provided at an additional charge.

SPECIAL UNITS MULTIPLE-OUTPUT, 100KV ISOLATED ELECTRON GUN POWER SUPPLY



PROBLEM:

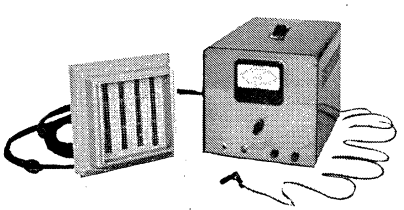
To design a multiple output high voltage power source for electron gun applications.

SOLUTION:

A standard, off-the-shelf RHR Series unit providing a 0 to 100KVDC at 1 mA output was used as the basic power source in a 6-foot rack. Two additional floating outputs of 0 to +1000-VDC and 0 to −1000 VDC used as grid bias voltages were modified Spellman RM Series modules. A 0 to 6 VDC output at 2 amps for filament voltage was specially designed for this system. The floating outputs were all isolated for operation at 100KVDC with respect to ground.

Spellman Solved the Problem!

60KV ELECTROSTATIC FLOCKING SYSTEM



PROBLEM:

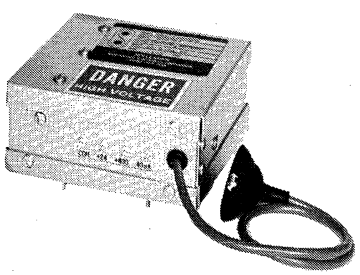
To design a compact, heavy duty, portable power unit for use in electrostatic processing, detearing, wall and object flocking, paint spraying, pinning, pinhole detection, and particle precipitation as well as general laboratory use.

SOLUTION:

The PF-60 (negative output, 50 μA) and ST-60 (positive output, 250 μA) 60KVDC power units were developed with features such as resistance surge protection and remote control operation making them ideal for the required applications.

Spellman Solved the Problem!

MODULAR POWER SUPPLY MEETING STRICT MILITARY SPECIFICATIONS



PROBLEM:

To design a compact, light weight modular high voltage power supply for use in Military applications with strict specification requirements.

SOLUTION:

The RM-10PX/MIL (one ±10KV output at up to 300 μA, one +400V ouptut at 5 μA, together wth a +400V monitor terminal capable of attachment to a microammeter to monitor the 400V output) was developed to meet strict military specifications. This model features ±0.1% line regulation and ±0.5% load regulation, with 0.25% ripple peak to peak on the 10KV output. The RM-10PX/MIL measures only 4½″ x 4″ x 2″ and weighs less than 2 lbs.

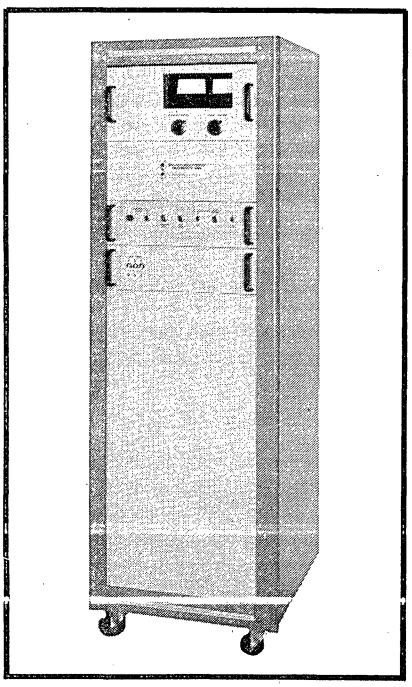
SERIES REGULATED POWER SUPPLIES

HP SERIES



APPLICATIONS:

- Gas Lasers • Capacitor Chargers
- Sputtering Supplies • Modulators
- General Laboratory Power Supplies

FEATURES:

- Voltage and current regulation with automatic crossover
- 100 microsecond recovery to line and load transients
- Voltage regulation better than 0.002%. Ripple better than 0.01%.
- Reversible polarity (most models)

Typical of this line is Model HP20PN-200SR, designed specifically as a gas laser power supply. The automatic regulating system permits the arc breakdown to occur at maximum open circuit voltage, followed by immediate current limiting action at any desired level. The unit features a high speed electronic series regulation system which provides fast transient response for line and load variations.

SPECIFICATIONS:

OUTPUT VOLTAGE—OUTPUT CURRENT: Continuously adjustable over the entire range from zero to rated voltage/current by means of separate ten-turn potentiometers. Resolution is better than 250 ppm. Finer resolution available on special order.

REGULATION: All models provide both voltage and current regulation with automatic crossover in accordance with the following characteristics.

Voltage Mode: Load: 0.002%, for full load changes. Line: 0.01%, for 10% line change. Specification holds down to 10% of rated output voltage.

Current Mode: Load: 0.01% + 1 microampere, for 10% load change (i.e., 10% voltage compliance variation); 100 microamperes, maximum, for full load (full voltage compliance) change. Line: 0.01% + 1 microampere, for 10% line change.

TRANSIENT RESPONSE: Voltage Mode: Less than 100 microseconds to recover to within 1% of maximum voltage level for 100% load step change, or 5% line voltage step change. Current Mode: Less than 100 microseconds to recover to within 1% of maximum current level for 10% load (voltage compliance) step change, or 5% line voltage step change. (Consult factory for response time to greater changes).

RIPPLE: Voltage Mode: 0.01% + 100 millivolts, peak to peak. Current Mode: 1% or 100 micro-amperes peak to peak.

INPUT VOLTAGE: 105-125 Volts, 55-65 Hz, single phase or 200-240 Volts line-to-line, 55-65 Hz, three phase, four wire, for "nominal" 115 Volts and 220 Volts listed in rating chart. Other voltages and frequencies available on request.

POLARITY: Reversible on all models up to 20 KVDC. Negative on all models above 20 KVDC. Positive polarity on higher voltage models available on special order only.

STABILITY: Voltage: 0.01% + 100 millivolts per hour, 0.025% + 250 millivolts per 8 hours. Current: Less than 100 microamperes, 8 hours.

TEMPERATURE COEFFICIENT: Voltage: 0.01%/°C. Current: 0.1%/°C.

TEMPERATURE RANGE: Operating: −20°C to +55°C. Storage: −40°C to +85°C.

METERS: Single range voltmeter, 2% accuracy. Single range ammeter, 2% accuracy.

CONTROLS: Main Circuit Breaker. AC ON indicator. Interlock Open indicator. High Voltage ON pushbutton. High Voltage ON indicator. High Voltage OFF pushbutton.

PROTECTION: Units up to 30 KVDC output are inherently protected by the automatic crossover regulating system. Thus, output voltage and output current must remain within ratings, and automatically limit at the preset levels for any extraordinary load condition. All power supplies are overload and short-circuit proof. Units are self-restoring when abnormal load condition is removed on all models up to 30 KVDC. Surge limiting resistors included. Circuit Breaker and control fuse included. Provision is made for external interlock.

HOW TO ORDER

Part Number System				
Prefix	Series	No. of Outputs	Voltage	Current
PK	2	1	05	2
Complete Kit	Regulated	One	5 Volts	2 Amps

1. Select the kit series which meets your requirements for regulation and ripple.

   Unregulated Series:
   Regulation: Line, 1.2% per 1% @ F.L. Load, 20% (½ to F.L.)
   Ripple: 1 V RMS, 5 VDC to 12 VDC. 2 V RMS, 15 VDC to 48 VDC.

   Regulated Series:
   Regulation: Line, (L.L. to H.L.) 0.15%. Load, (N.L. to F.L.) 0.2%.
   Ripple: 5 mV P-P.

   Highly Regulated Series:
   Regulation: Line, (L.L.-H.L.) 0.01% +1 mV. Load, (N.L.-F.L.) 0.01% +1 mV.

2. Pick the desired output voltage from the left hand column of the chart for the series.
3. From the second column pick the prefix designating a complete kit (PK) or the transformer only (PT).
4. Move right horizontally to the box under the desired output current. Add the number in that box to the prefix. The price for the kit is also shown in this box.

Example: Complete Regulated Series kit with 5 VDC output at 2A: PK2105-2
Transformer without other kit components: PT2105-2

All power supplies in the Quad-Mod Series contain a dual tracking output providing a positive and negative tracking output voltage. The negative supply will track the positive supply, but does not have to be of the same current rating. Because of the tracking feature, only the positive supply is provided with a voltage adjustment. The negative supply is factory set to within 2% of the positive. The **two output module** consists of a dual tracking output. The **three output module** consists of a dual tracking output plus an additional separately controlled positive output. The **four output module** consists of a dual tracking output, a separately controlled positive output, and a floating output that is separately adjustable and can be operated either isolated from the system common, or connected as a positive or negative supply.

Input: 105-132 VRMS, 47-420 Hz single phase.
Regulation, Line: 0.1% or 10 mv for rated line change.
Regulation, Load: 0.1% or 10 mv for rated load change.
Ripple and Noise: 1 mvRMS, 10 mv P-P to 10 MHz.
Temperature Coefficient: 0.03% per deg. C.
Recovery Time: 50 micro sec to within 50 mv for no-load to full-load change.
Overload Protection: Automatic current limiting foldback.
Operating Temperature: —20°C to + 50°C rated current to 60°C derate 10%; to 71°C derate 25%.
Storage Temperature: —55°C to +85°C.
Remote Sense: Sense terminals provided for correction of up to 0.5 volt load lead drop.
Input-Output Configuration: Barrier strip.
Optional: Over-voltage protection on any or all outputs.
Voltage Adjust: Screwdriver control.

TABLE I: Shows the current ratings available for each nominal voltage. The shaded areas of the table show the reduced current ratings for extended output voltage range operation. The currents are tabulated by a letter series. To specify the rating of an output it is only necessary to specify the nominal voltage (ex. "5") and the current letter (ex. "C") to completely specify an output rating (ex. "5C" is a nominal 5 volts @ 7.5 Amps). Consult factory for ratings not shown.

TABLE II: Shows the combination of outputs that can be incorporated in each case size.

HOW TO ORDER —

(1) Select required output ratings from Table I
(2) Establish Case Size and Price from Table II
(3) Establish Model Number as follows:

Q 5C — 15A 15C — 24M

- **Q** — Series "QUAD-MOD"
- **5C** — + Individual Voltage and Current (Omit on 2 Output only)
- **15A** — + Tracking Voltage and Current
- **15C** — − Tracking Voltage and Current
- **24M** — Floating Voltage and Current (4 Output only)

with TELE-DYNAMICS/WANLASS "Off-the-Shelf" TW/TWD Miniature DC Power Supplies

The TW and TWD series miniature power supplies are rugged modular assemblies that provide well regulated, reliable dc power. Twenty-three models are available in most commonly used output voltage and current ratings. Typical applications are to power operational amplifiers, decimal displays, digital logic, signal conditioners, and instrumentation.

The TW model supplies have a single output that is adjustable ±2% by using an external trim resistor. These single output units can be used individually or connected in pairs where positive and negative voltages are required. The TWD models are available for those users who prefer dual output supplies in a single assembly.

All supplies are designed to withstand substantial overloads for reasonable periods of time. The output can be shorted without causing damage to the supply, however, prolonged operation with the supply overloaded or shorted is not recommended.

The TW and TWD series supplies are packaged for either chassis or printed circuit board mounting. Electrical connections can be made either with connector pins or by soldering. Threaded inserts are used to secure the units to the mounting surface.

GENERAL SPECIFICATIONS

The following general specifications apply to all TW and TWD series dc power supplies.

Input voltage: 115 ±10 VAC*

Input frequency: 50 to 400 Hz

Input isolation: 50 megohms

Output impedance: 0.2 ohms at 10 kHz

Output voltage setting: ±2% of rated voltage

Storage temperature: -25 to +85°C

Operating temperature: -25 to +71°C

Output current vs temperature: Each output is rated for full current at temperatures between -25° and +70°C with no derating.

Trim adjustment: (TW series units only)
The output voltage of each single output power supply (model TW) is factory set to within ±2% of the labeled value. The TRIM connection provides a means of externally adjusting the output voltage precisely to the labeled voltage.

The method of adjustment is to connect a resistance (20 kilohms or larger) between the TRIM terminal and the positive (+) or negative (—) output terminal, depending on the desired direction of change. To lower the output voltage, the trim resistance is connected between the TRIM and (—) terminals. To raise the output voltage, the trim resistance is connected between the TRIM and (+) terminals.

An attempt to use the trim feature to set the output to a voltage other than the labeled value may result in the supply failing to meet its performance specifications.

***Add $5.00 to unit price for 230 VAC input power.**

ROTARY MOTOR-GENERATOR SYSTEMS

TELEDYNE INET
. . . PIONEERS IN PRECISE POWER

Let Teledyne Inet Rotary Systems Supply Reliable, Precise Power to Your Critical Loads.

Frequency Converters and Power Conditioners

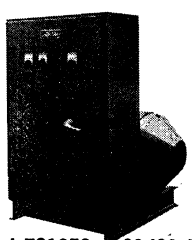
Teledyne Inet's 60/400 Hz conversion systems are designed for data processing, shipboard, and aircraft ground power applications. Built around a rugged, synchronous motor-generator set and advanced solid-state regulation and control circuitry, they deliver clean, precisely-regulated 400 Hz power reliably and efficiently. Single-phase models are rated from 3 to 125 KW and three-phase units from 5 to 500 KW.

An IBM-compatible, 60 Hz/415 Hz induction motor-synchronous generator frequency converter is available in capacities from 5 to 150 KW.

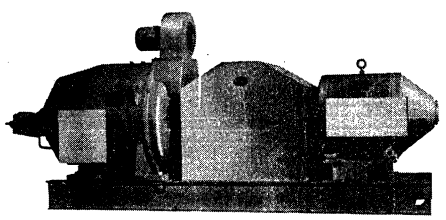
60/60 Hz rotary power conditioners supply precisely-regulated, noise- and transient-free power to critical computer and data processing system loads. Output ratings range from 30 to 150 KW.

These low maintenance high-reliability units have better than 15,000-hour mean time between failure (MTBF). The exciter is mounted on the rotor shaft, which eliminates slip rings and brushes, the primary source of wear, maintenance, and RF interference, and makes these systems safe for use in hazardous areas. 40 KW, 400 Hz and 150 KW, 60 Hz and larger are available as vertical units; horizontal units are available up to 125 KW in 60 Hz and 400 Hz. Inet's vertical M-G sets have logged up to 100,000 hours of continuous operation. Vertical units are available for parallel operation, and can be servo-rotated for optimum phase alignment.

Model VF21060 — 60/400 Hz, 75 KVA, Synchronous, Vertical Motor-Generator Set.



Model T21050 — 60/60 Hz, 62.5 KVA, Synchronous, Horizontal Motor Generator Set.



Rotary Power Ride-Through, 60 Hz, 240 KW, Motor-Generator Power Supply With Flywheel.

RIDE-THROUGH GENERATORS

Teledyne Inet's flywheel, ride-through motor-generator units bridge short-term interruptions in utility power. Designed for use in high priority electrical/electronic systems, such as data processors and communications centers, they are available in output power ratings up to 150 KW. Flywheel size is determined by the energy required to deliver rated voltage and load current for a user-specified, ride-through interval and frequency droop. Inertial energy stored in the rotating flywheel drives the generator during momentary (typically 500 millisec. or less) losses of input power. On-line ride-through generators driven, by low-slip induction motors, deliver clean, precisely-regulated power, offering a low-cost alternative to auxiliary and uninterruptible power systems in applications where only short-term breaks in utility power occur or where the system can deliver quality power long enough for an orderly shutdown of the critical load. Extended ride-through capabilities are available using optional techniques.

TYPICAL FEATURES AND SPECIFICATIONS INCLUDE:

• Shaft-mounted, solid-state exciters • Solid-state voltage regulators • Input power, 208 or 460 volts ±10%, 3ϕ • Transients, ±10% of input voltage less than 2 sec. long • Spikes, 1 KV amplitude, less than 100 ms. long • Voltage adjustment, ±10% • Voltage regulation, 1% • Voltage imbalance, ±1% (balanced load) • Harmonics, 3% RMS • Overload capability, 110% of rated continuously, 120% for one-half hour • Short circuit capacity, 300% of rated current into a three-phase short • Internal temperature sensor (optional) • Under-frequency sensor with remote and/or automatic shutdown • Remoting for OFF/ON control and MOTOR ON indicator.

UPS* | TELEDYNE INET

. . . PIONEERS IN PRECISE POWER

MODULES RANGING IN SIZE FROM 5 KVA TO 300 KVA

Teledyne Inet, pioneer in precise power, has an on-line UPS with the power capacity, control features, and rock-solid reliability to take care of your requirements.

Uninterruptible Power Systems from Teledyne Inet deliver much more than emergency and standby power. Critical loads receive only high-quality, regulated, noise- and transient-free, AC power . . . whether line power is present or not. Quality, reliability, and superior performance make these Inet UPS systems the best insurance for any data processing, communications, or high-priority system that cannot tolerate power problems.

The Power Converter (Rectifer/Charger and Static Inverter) is the basic element of the UPS system. Two or more power converters may be paralleled to provide redundancy or greater capacity. Input and output switchgear, bypass, and system control electronics are located in a separate enclosure whose size varies with system configuration and the options. All are available with 208, 240, or 480 volt input or output, and 50 or 60 Hz input or output. All units are 3-phase input.

FEWEST SCR's The output DC/AC inverter uses the smallest possible number of silicon-controlled power rectifiers. In three-phase systems, the same set of 12 SCR's (4 per phase) which convert DC power to AC power in the inverter, are used for inverter turn on, and inverter turn off, and output AC line disconnect. The result, a UPS with the lowest possible parts count and the highest degree of reliability. High-speed inverter disconnect (under 300 usec.) by SCR's minimizes load transients if the inverter fails.

DERATED SEMICONDUCTORS SCR's and rectifier diodes are never operated at more than 65% of their maximum ratings, greatly extending their operating lifetime.

INDEPENDENT PHASE REGULATORS Inverters on each phase of three-phase systems are independently regulated. These UPS systems sustain any degree of load unbalance and maintain 2% regulation on all phases.

HIGH-OVERLOAD CAPACITY UPS systems built by Inet withstand overloads of 150% for fifteen minutes. Large inductive transients will not cause shutdown or line disturbance.

INVERTER ENERGY RESERVOIR The inverter energy storage tank circuit smooths load switching transients and clears protective fuses or circuit breakers, while maintaining in-spec power to the critical load, if a load bus fault occurs.

MODULAR CONTROL LOGIC Each UPS module has its own control logic. In redundant UPS systems, if one module fails, the faulty module is disconnected without disturbing the overall system operation. The entire system continues to operate in a normal mode. All common synchronizing circuitry and interconnecting wiring is redundant, so that failure of any component, terminal, connector or wire in either the open or shorted mode, generates transients less than +10%, —8%, on the critical load bus.

LOW HARMONIC CONTENT Harmonic currents generated by the rectifier-charger are less than 5% of rated current (for units rated at 75 KVA or larger). The UPS does not degrade the power quality for other equipment on the same line.

HIGH EFFICIENCY System efficiency is as high as 86% on large UPS systems, for low power losses and reduced operating costs.

DESIGNED FOR LOW EMI Every Inet UPS system can be supplied with filters to fully comply with MIL STD 461 for electromagnetic interference (EMI). Standard equipment, without EMI filters, is totally free of interference regardless of proximity to data processing equipment.

AUTOMATIC BYPASS An optional sensing and switching circuit is available, which automatically bypasses the UPS and transfers to utility power if a major failure occurs in the UPS. If line power is present, the transfer takes place without disturbing the critical load.

AUXILIARY POWER SOURCES

Teledyne Inet is a **single source** supplier for all your power needs. If your high-priority systems are subject to long-term power outages that batteries cannot economically handle, Inet supplies a complete line of Auxiliary Engine/Turbine-generator units (APU) of all types and ratings to back up your UPS.

APPLICATIONS FLEXIBILITY

Inet's UPS equipment is modular for easy expandability and rapid servicing. Units with the same power ratings can be parallelled as needed for extra capacity or to implement ultra-reliable redundant systems. Automatic bypass and emergency shutdown switchgear can further insure your critical electronics against the most catastrophic power failure conditions, short of physical destruction. Our applications engineers are on call, to provide you with a UPS system tailored to fit your specific requirements. Teledyne Inet also provides a complete turnkey service, assuming total system responsibility for switchgear, emergency generators, installation, startup, and long-term maintenance for any size UPS installation.

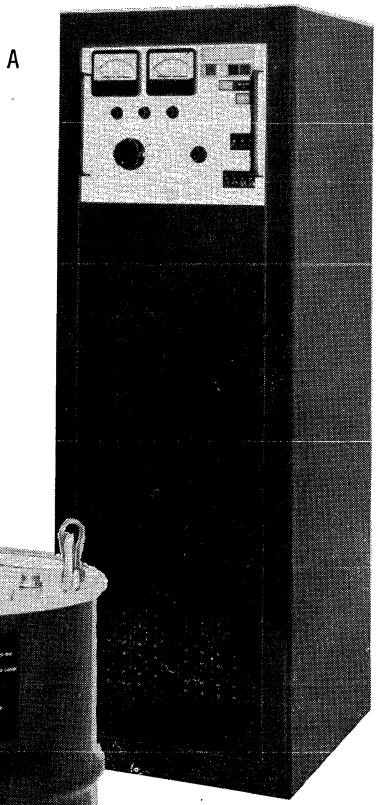
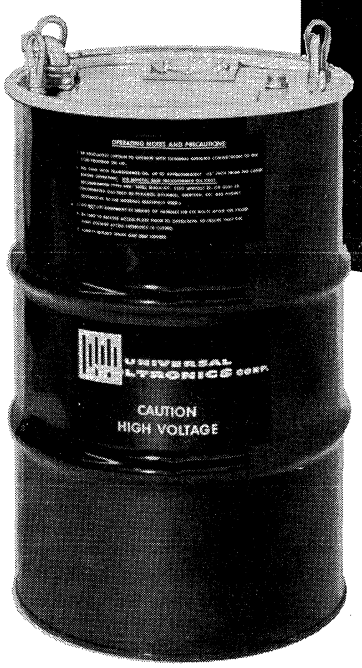
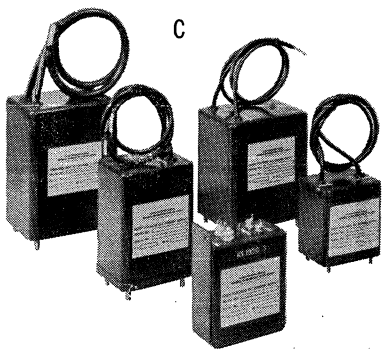
high VOLTAGE DC POWER SUPPLIES



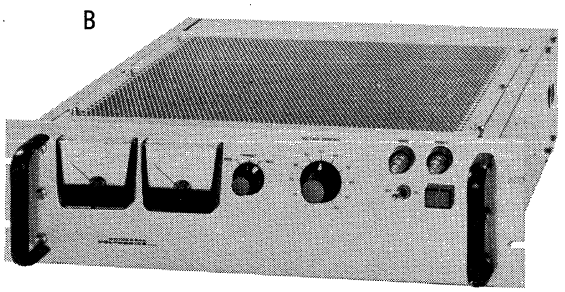
A



D



C



B

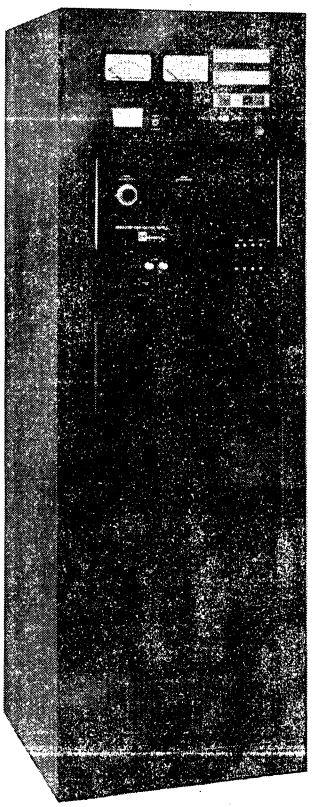
ADJUSTABLE OUTPUT POWER SUPPLIES

Series "BA" adjustable power supplies and series "BP" power packs are available at voltage ratings from 1 KVDC through 2000 KVDC at output power ratings from 1 watt to 250 kilowatts continuous. The adjustable series includes applications oriented control features and package design as shown in photos A and B. The power pack series (photos C and D) has many applications in OEM systems and for general laboratory use.

Every UVC power supply includes conservatively rated high voltage components designed and manufactured under the strict control of the specialized UVC technical staff to insure continuous duty, long term, trouble free operation. A one year factory backed and field supported warranty policy accompanies each shipment.

LOOK AT THESE FEATURES

1. **Ripple** Each power supply offers a standard ripple specification of 5% maximum or better. Optional filters and attenuators are available for every UVC supply to reduce ripple to as low as .01% rms.
2. **Polarity** Each power supply offers the flexibility of reversible output polarity performance.
3. **Protection** Overvoltage and overcurrent protection features are available as both adjustable range and fixed value circuits. All access areas and doors are interlocked for personnel protection and all energy storage components and circuits are discharge protected for personnel protection.
4. **Package** Rack mounted, floor and bench operable as well as portable design are among the packages available for UVC standard high voltage power supplies.

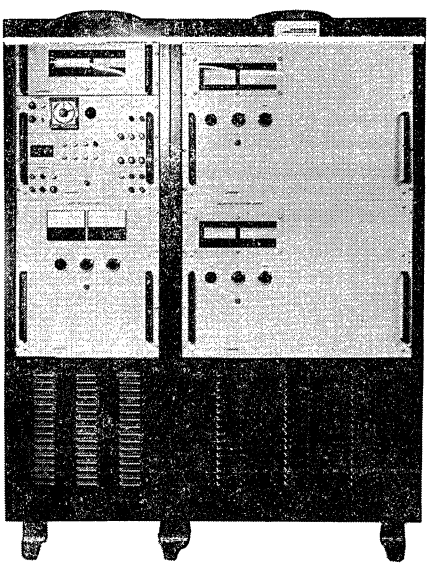


PRECISELY REGULATED EQUIPMENT

Precisely regulated performance over wide adjustment range, low ripple, fast response and high stability enable the series "BRE" power supplies to be used in exacting work for x-ray spectroscopy, electron microscopes, TWTs, ion bombardment experiments, particle separators.

These precisely regulated power supplies are available in voltage ratings from 1 KV through 500 KVDC at continuous duty output power up to 100 KW. Our regulation circuitry techniques realize performance specifications which are virtually independent of input line variations or no load-full load changes. Ripple in most cases is 0.01% rms and the output polarity is available as both fixed and reversible. Two voltage adjustment schemes are offered, namely digital dialable control for the most exacting applications and continuous coarse and vernier controls. In the digital dialable scheme, we allow for adjustment in increments of 10 KV, 1 KV, 100 volts, 10 volts, 1 volt and 0-1 volt vernier. This system provides the assurance that the actual output is always within 1% of the dial readings. As indicated, you may select a coarse and vernier voltage adjustment scheme and realize economic savings without sacrificing basic regulated performance. Regulation accuracy of $\pm 0.25\%$; $\pm 0.1\%$; $\pm 0.05\%$ and $\pm 0.01\%$ for line or load changes are available on most series "BRE" power supplies.

TWT/CFA POWER SUPPLY SYSTEMS



Chances are your TWT tubes were production tested by a UVC Power Supply. As a matter of record, UVC has been supplying power supplies to leading TWT manufacturers for low, medium and high power TWT's that not only satisfy the demanding requirements of TWT production, quality control and life testing, but in-the-field performance and reliability as well.

You can forget about power problems when you marry your TWT's to UVC Black Boxes. They are available with Cathode, Heater, Collector, Anode and Helix outputs. Each UVC Black Box system features:

- **Pulsed or CW operation**
- **Turn ON/OFF Sequence Control To Insure Safe and Proper Performance**
- **Fast-Acting Crowbar Protection**

ELECTRICAL SPECIFICATIONS FOR "S" and "T" SERIES

Input Voltage: 105 to 125 Volts AC single phase for all units 1000 VA and below (nominal 115 Volts). All models from 1250VA to 20,000VA are normally supplied with 208/230 Volts AC three phase input.

Input Frequency: 47 to 65 Hz.

Output Configuration: Single phase models have two wire floating output (one side may be grounded) insulated for 500 Volts RMS.

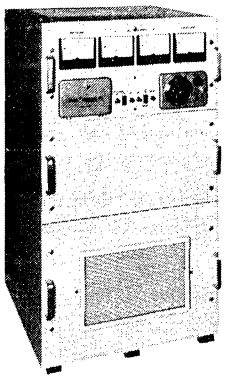
Output Voltage: Adjustable 0 to 32, 0 to 75, 0 to 135 and 0 to 270 Volts AC.

Voltage Regulation: Less than 0.5% for no load to full load change. ±0.5% for rated input voltage change.

Load Power Factor: 0.7 lead or lag to unity at rated output; wider power factor range with slight derating.

Output Wave Shape: Sine wave. Less than 3% total harmonic distortion over the 45-10000 Hz frequency range. Less than 2% 45 to 6000 Hz.

Hum and Noise: 60 db below maximum output voltage.



Model 5000T/V135C

ADDITIONAL SPECIFICATIONS FOR THREE PHASE UNITS

Output Configuration: Three Phase, 4 wire wye, neutral floating.

Output Voltage: 0-135 Volts line-to-line and 0-234 Volts line-to-line; both sets of terminals are presented at output. Full power available at output of 115-135 Volts and 200-234 Volts. Master gain control and phase 2 and 3 trim controls provided on the Plug-In Oscillator.

Unbalanced Phase Loading: Separate power amplifiers and regulation circuits are provided for each output phase. Therefore, unbalanced phase loading has negligible effect as long as the rated output power per phase is not exceeded.

Output Phase Separation: 120 ±1° for fixed frequency models as well as 300-500 Hz models. 120 ±2° for 45-75 and 320-2,000 Hz models. 120 ±3° for 45-6,000 and 45-10,000 Hz models.

Output Power: Rated output power for each model is shown on the chart. Maximum power per phase is ⅓ of 3φ output.

Protective Circuits: All models are equipped with instantaneous overload protection and front panel reset. An overload in any phase causes all phases to shut down, thus protecting 3φ loads. Front panel lamps also indicate which phase has been overloaded.

Meters: Models rated 150VA to 600VA are furnished with output voltmeter and selector switch to monitor any line-to-line and line-to-neutral voltage. Models rated 900VA to 20KVA have three (3) output voltmeters with selector switch to monitor any line-to-line and line-to-neutral output voltage as well as plate current of the 3φ amplifier for the T series.

PLUG-IN OSCILLATORS FOR "S" and "T" SERIES

These oscillators feature all silicon solid state components and precision variable frequency determining elements and are available in **single phase, two phase,** and **three phase.** All single phase oscillators are provided with an external signal input.

Frequency Stability: Oscillators may be ordered with frequency stability ranges from ±0.5% thru ±0.001% as shown in the table below.

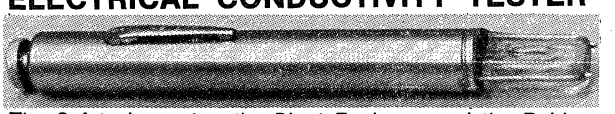
ELECTRICAL CONDUCTIVITY TESTER



The Safety Inspector, the Plant Engineer, and the Rubber Product Salesman will find this inexpensive, pocket-sized instrument useful.

FACT
Rubber belts and hose used in hazardous environments should be made from conductive rubber compounds to prevent accumulation of dangerous static electricity.

PROBLEM
Conductive Black Rubber and Nonconductive Black Rubber look alike.

SOLUTION
Press the Electrical Conductivity Tester Probe Tip against the rubber item and push the button. If the conductivity is high enough to be safe the Neon Bulb in the transparent probe tip will flash. Unsafe — No flash.

In many applications this tester will replace a bulky $500 Megohmmeter or Insulation Resistance Tester and is the ideal instrument where portability and economy are important. Private Branded Testers are available in quantity for use by Rubber Manufacturers' production Inspectors and Field Sales Engineers.

The Model 720 Electrical Conductivity Tester is available from stock, FOB Denver, at $29.95 Net each.

OTHER QUALITY PRODUCTS

FREQMETERS, DISCRIMINATORS, PHASEMETERS

Solid state frequency-to-dc converters and discriminators will linearly convert frequency or repetition rate of signals to a proportional dc output. Waveforms can be sine, square, sawtooth or triangular. Standard models are available to cover a wide range from zero to 300 kcps. Expanded scale, differential frequency, under/over frequency and phase detectors are available (meter, meter relay and relay types are also available).

Only the Models 400 to 440 Freqmeters are basic f-dc converters, the output being proportional to the product of frequency and peak input voltage. The 410KF to 440KF are solely frequency dependent (independent of peak input voltage). 450KF to 480KF units require lower drive (millivolts).

The 486E is an expanded scale Freqmeter while the 491ME is a mirrored-scale visual panel meter version. The 411 and 421 units are difference Freqmeters. The 401 series FM discriminators are for IRIG channel telemetering. The 471 is a Hi-Lo pass frequency sensitive relay suitable for under/over frequency and speed detection and control.

The 791 Phasemeter is a phase-to-voltage converter. These units have been designed for applications where stability, ruggedness, long life, efficiency and freedom from maintenance are prime requisites. Miniature, stable and rugged designs make these units ideal for military, aerospace, industrial and portable applications.

OSCILLATORS, CONVERTERS, OP & LOG AMPS RELAYS, CHOPPERS, TRANSDUCERS, SUPPLIES

Solid state oscillators and converters are available in many types (MIL-SPEC too). S-100, S-200 are LC sine oscillators (rugged and stable). The S-310 is tuneable. Series 300VF Voltage-to-Frequency converters change analog signals to frequency and are matched to our Series 400KF Freqmeters. The V-511, MV-515 (20 millivolt input) Voltage Controlled Oscillators (VCO) are designed for IRIG FM telemetering. The V-521 is a micro-version of the V-511 (without bandpass filter). The PCXO-116 is crystal controlled and programmable to 13 frequencies. The 5021 TELEMOD combines a VCO and FM transmitter in a single micro-package. The Model 3002 op-amp is superlative in its capabilities, i.e. microvolt input, 0.6 microvolts/°C and 2 picoamps/°C drift, 300 megohm input impedance, short-circuit proof, no compensation required, no latch-up, zero offset adjustable, wide temperature range, microminiature, replaces chopper-stabilized amplifiers. Use the MA531 to mix several VCO channels. The AD6001 is a 10 bit successive approximation analog-to-digital converter. The DCI-177 isolates DC signals eliminating grounding or supply isolation problems.

Manufacturers and Sales Offices Directory

This is an alphabetical listing of more than 3,000 manufacturers supplying electronic equipment, instrumentation, components, materials and fabrication services. Included for each company are name, address, telephone number, name of the key sales executive and TWX numbers, where available. In addition, companies have provided the name or names of individuals who may be contacted by the EEM user for additional product information. Listings may also include names of certain distributors who have paid to be included as part of the manufacturer's listing. For complete alphabetical and geographical listings of all distributors, see the Distributors Directory, on page 1594, yellow section. **Bold face** listings indicate those manufacturers who have provided catalog data in the white pages. Page and volume numbers are indicated for these manufacturers. Sales office listings are provided for key electronic manufacturers.

This directory was completely revised and updated for this edition prior to publication. Thus the information is current as of Spring 1973. This same index appears in all three volumes of EEM.

Equipped with the newest Tri-Phasic automatic zero conversion techniques and other 1973 features the Data Precision 5 1/2 and 4 1/2 digit digital multimeters provide all the features of the expensive units at a fraction of their cost. With a basic d.c. accuracy of 0.004% of range the model 2540, 5 1/2 digit unit without extra cost options measures full range d.c. volts, a.c. volts, ohms, and ratio. The standard unit also automatically ranges, provides both isolated BCD outputs and remote control inputs. At better than 0.01% accuracy the 4 1/2 digit model 2440 has the same features. Options include an extremely low level preamp and rechargeable battery operation capability.

Digilin manufactures a complete line of digital panel instruments. These range from low cost instruments using large scale integrated circuits, to systems of instruments operating directly from transducers and providing digitel control points.
First to introduce the Light Emmitting Diode and Liquid Crystal digital panel meters, Digilin is a leader in the new technology. The high performance per dollar achieved has enabled the company to rapidly achieve a strong position in the digital panel instrument market.
Products include non-linear transducer indicators for use with thermocouples, resistance bulbs, thermistors, and flow transducers. Complete with internal amplifiers and excitation power, instruments are available to display outputs from strain gauges, LVDT's, and other units.

POWER TRANSFORMERS are manufactured to cover the frequency range from 50 Hz to above 20 KHz. The power capacity varies from a fraction of a VA to typically 1 KVA; INVERTER TRANSFORMERS are custom made to cover the full range from micro miniature units supplying a fraction of a watt to units of 1 KW or more; PRECISION RATIO TRANSFORMERS are designed to meet a wide range of requirements. Transformation Ratio accuracy can be held to very tight tolerances, typical +.01%. Other parameters are usually limited by size, frequency of operation, impendance levels, etc.; CURRENT TRANSFORMERS are custom made to your requirements. EWC is designing and producing units that span the range from 60 Hz commercial units to 30 MHz RF units for submarine service; L-C FILTERS are produced for lowpass, highpass, bandpass and bandstop application. The filters are custom made to meet individual requirements in the frequency range of 400 Hz to 200 KHz. The filter size will depend upon the source and load impedances, attenuation, bandwidth, cutoff frequency and the input signal level; INDUCTORS manufactured are of Laminated construction for DC and low frequency filtering. Toroidal inductors for high stability and high Q for mid band application. Ferrite cup core inductors for high frequency and/or adjustable applications.

Metra Instruments manufactures the Metrascope, Metralarm and Metralogger, multi-channel data acquisition, and display instrumentation for use with thermocouples, strain gauges, RTD's and other transducers.

The Metralarm provides all necessary signal conditioning and A/D conversion for digital data and alarm display.

The Metralogger, when used with the Metralarm, will provide a printout of input and/or alarm setpoints on demand, a time cycle, or whenever an alarm occurs.

The Metrascope, when used with the Metralarm, will provide a simultaneous cathode ray tube display in bargraph format of all channels and their alarm setpoints.
